MONTREAL, QUEBEC--(Marketwired - Nov 12, 2015) - DIOS EXPLORATION (TSX VENTURE:DOS) reports significant positive 3D interpretation results and assay checks from HEBERTO GOLD drilling discovery. Several distinct gold zones were intersected in strike over hundreds of metres and at depth. Data compilation in plan view and vertical sections shows several 10-20 true width zones with high potential for future gold discoveries in strike over hundreds of meters or at depth.

Several drill holes hit 10 to 20 m gold zones with at least 3 altered zones or *splays* defined in same section this fall, the main one discovered in surface and drilling in section A (2 g/t gold over 22 m, 2.13 g/t gold over 22.9 m in other hole incl. 4.79 g/t gold /8.65 m and 2.47 g/t gold over 10 m in another hole (1.63 g/t gold /18.45 m) as well as in section H located 135 m south. Hole BB, 105 m north of AA, hit 3.7 m with 3.23 g/t gold (true width), 1.51 g/t gold over 1.6 m and 1.23 g/t gold over 1.10 m and altered zones: 0.21 g/t gold /13.4 m & 0.22 g/t gold /5.25 m. Strike extents are drill targets.

Heberto structure is N160 striking, dipping 40-50 degrees west, so next drill targets will be more to the west. Section D 350 m due north of A (HEBERTO) hit 7.6 g/t gold over 0.4 m, 1 g/t gold over 0.75 m and 2 g/t gold over 0.5 m, but main zone is aligned more to the west, related to a strong magnetic high thus to be drilled.

Hole H 135 m south of A had hit 3.04 g/t gold over 4.35 m (1.884 g/t gold /7.05 m) 50 m under surface and 3.46 g/t gold /2.20 m and 1.9 g/t gold/1.00 m then hole HH hit 1.94 g/t gold/ 7.75 m (incl. 3.26 g/t gold/ 3.75 m). Several gold targets to be drilled will check splaying that could widen or get richer near favourable contacts. Section 235 m south of HEBERTO will be drilled more to the west, due to west dipping of the zone, and hole 8 drilled east towards east just missed it (1.025 g/t gold /1 m at top of hole).

Stripping west of HEBERTO (5.18 g/t or /5 m in outcrop) is planned (thin overburden) to find surface extent of other zones cut in section A (2.47 g/t gold /10 m). This release was prepared by M.J. Girard, M.Sc. Geo, 43-101 Qualified Person. See Sept. 9 & 23 and Oct. 7 releases for gold zones mineralogy and previous results. This wholly-owned property is held by DIOS, without any royalties and HEBERTO GOLD is located 12 km west of EM1 CAMP, James Bay, road accessible, 50 km south of GOLDCORP's gold mine.
