

# Athabasca Nuclear Corp.: Announces Pikoo Airborne Results

17.11.2015 | [FSCwire](#)

Vancouver, British Columbia (FSCwire) - [Athabasca Nuclear Corporation](#) ("Athabasca Nuclear" or the "Corporation") reports that further to its news release of October 28, 2015, it has received the report on its recent fall airborne geophysical survey at Prongua Lake, as interpreted and prepared by Campbell and Walker Geophysics Limited ("C&W"). C&W ranks targets based on a 1-5 scale, with 1 being classed as a likely or probable kimberlite and 5 being classed as most likely not a kimberlite. According to the C&W report, rank 4 targets are generally not felt worthy of concerted ground investigation unless ancillary information is suggestive of prospective bodies. The C&W report identified a total of 3 geophysical anomalies, with two anomalies being classed as rank 4 targets and one anomaly classed as a rank 3 target. No rank 1 or rank 2 targets were identified.

## Other Matters

The Corporation also reports that the continuation of the Corporation from Alberta to British Columbia, which was approved by the Corporation's shareholders at its annual and special meeting of shareholders held on September 8, 2015, was completed on November 10, 2015.

## Qualified Statement

The technical information in this news release has been prepared in accordance with the Canadian regulatory requirements set out in National Instrument 43-101 and reviewed and approved by Carl Schulze, B.Sc., P.Geo, a Director of Athabasca Nuclear and a Qualified Person.

## About Athabasca Nuclear Corporation

Athabasca Nuclear Corporation (TSXV:ASC) is an exploration company focused primarily on uranium exploration in the Western Athabasca Basin in Saskatchewan, Canada, and other select opportunities.
