

NANAIMO, BRITISH COLUMBIA--(Marketwired - Jun 20, 2016) - [Troymet Exploration Corp.](#) (TSX VENTURE:TYE) ("Troymet" or the Company") is pleased to report that it has received the final results from a Volterra-3DIP survey over the Alpha zone, Redhill project. While final modelling and interpretation of the data is underway, preliminary results show a domain of high chargeability and resistivity along the west side of the grid at a depth of ~200 metres (Section 1600N, Chargeability & Resistivity). This domain is flanked to the east by a domain of low chargeability. While the geology and structures of the different domains remain to be confirmed, it is clear the 3DIP data is mapping previously unrecognized and fundamental geological patterns in the Alpha zone which will guide exploration.

The Redhill volcanogenic massive sulphide ("VMS") prospect occurs in a prospective volcanic sequence that tracks the contact of the high/low chargeability domains. This contact will be a focus of future exploration. The VMS prospect is associated with a 200 metre long Fixed Loop Transient EM conductor as well as Borehole Transient EM conductors. Hole RH06-25, re-logged, quartered and re-assayed by Troymet, returned: 8.75% copper, 4.75% zinc, 1.22 g/t gold & 61.19 g/t silver over 2.04 metres. The mineralization is open along strike and to depth.

The survey also identified a large chargeability anomaly (> 20 milliseconds), over an area of ~280 X 260 metres, just west of the VMS prospect, and another (16-18 milliseconds), over an area ~ 210 X 100 metres, in the southeast part of the grid. There is no record of drilling or other exploration on either of these targets.

The gold-in-soil anomaly (200 metre line spacing with 50 metre stations) is aligned along the northeast edge of a resistivity high. Geologically, the resistivity feature appears to comprise diorite-granodiorite intrusive into interlayered rhyolitic and andesitic volcanics with EM conductors. Troymet plans further exploration of the gold anomaly prior to drilling.

The Volterra-3DIP survey was conducted by SJ Geophysics Ltd. of Vancouver. Nine lines (10.8 km) at a spacing of 150 metres were surveyed.

President and CEO, Kieran Downes, P. Geo., a Qualified Person as defined by National Instrument 43-101, has reviewed and verified the technical information provided in this release.

About Troymet Exploration Corp.

[Troymet Exploration Corp.](#) is a junior exploration company with a solid treasury and with projects in British Columbia (Redhill and Golden Eagle), Manitoba (McClarty Lake) and Utah (Wildcat). Troymet operates the Wildcat, Redhill and Golden Eagle projects. [HudBay Minerals Inc.](#) is the operator of the McClarty Lake joint venture and must contribute \$1,151,052 in joint venture expenditures before Troymet is required to fund its participating interest. Troymet retains a 2% net smelter returns royalty (NSR) on the Key property, British Columbia, which was sold to [New Gold Inc.](#) in 2013.

Neither the TSX Venture Exchange nor its Regulation Services Provider (as that term is defined in the policies of the TSX Venture Exchange) accepts responsibility for the adequacy or accuracy of this news release.

This news release contains certain forward-looking information. All statements included herein, other than statements of historical fact, are forward-looking information and such information involves various risks and uncertainties. In particular, this news release contains forward-looking information in respect of: the Redhill Project, including the possible exploration and development of the Redhill Project; the exploration potential and analogous deposit potential of the Redhill Project; future data analysis, sampling plans and exploration plans on the Redhill Project; the timing for exploration and drilling on the Redhill Project; exploration targets and the potential of such exploration targets; and the ability and the timeframe within which the Redhill Project can be advanced. There can be no assurance that such information will prove to be accurate, and actual results and future events could differ materially from those anticipated in such information. This forward-looking information reflects Troymet's current beliefs and is based on information currently available to Troymet and on assumptions Troymet believes are reasonable. These assumptions include, but are not limited to: the current share price of Troymet's common shares and the ability to raise future equity financing, if needed, at prices acceptable to Troymet; Troymet's current and initial understanding and analysis of the Redhill Project; the ability of Troymet to discover viable exploration targets and the results of exploration on the Redhill Project; the cost of exploration, including sampling and drilling, on the Redhill Project; Troymet's general and administrative costs remaining constant; and the market acceptance of Troymet's business strategy.

Forward-looking information is subject to known and unknown risks, uncertainties and other factors which may cause the actual results, level of activity, performance or achievements of Troymet to be materially different from those expressed or implied by such forward-looking information. Such risks and other factors may include, but are not limited to: the early stage development of Troymet and its projects, and in particular, the Redhill Project; general business, economic, competitive, political and social uncertainties; capital market conditions and market prices for securities, junior market securities and mining exploration company securities; commodity prices; the actual results of current exploration and development or operational activities; competition; changes in project parameters as plans continue to be refined; accidents and other risks inherent in the mining

industry; lack of insurance; delay or failure to receive board or regulatory approvals; changes in legislation, including environmental legislation, affecting Troymet; timing and availability of external financing on acceptable terms; conclusions of economic evaluations; and lack of qualified, skilled labour or loss of key individuals. A description of other assumptions used to develop such forward-looking information and a description of other risk factors that may cause actual results to differ materially from forward-looking information can be found in Troymet's disclosure documents on the SEDAR website at [www.sedar.com](http://www.sedar.com). Troymet does not undertake to update any forward-looking information except in accordance with applicable securities laws.
