

VANCOUVER, BC--(Marketwired - June 24, 2016) - [UEX Corp.](#) (TSX: UEX) ("UEX" or the "Company") is pleased to announce the radiometric results of drill hole CB-092-1 at the Christie Lake Project (the "Project"), where UEX has a \$2.75 million drill program which recommenced in mid-June. The Project is owned 10% by UEX and 90% by JCU (Canada) Exploration Company Limited ("JCU"). UEX holds an option to earn up to a 70% interest in the Project.

Radiometric Equivalent Grades ("REGs" or "eU<sub>3</sub>O<sub>8</sub>") from down-hole probe results from hole CB-092-1 (see Figure 1) intersected widespread uranium mineralization within which a high-grade core averaged 3.82% eU<sub>3</sub>O<sub>8</sub> over 2.6 m (507.25 to 509.85 m). Within this core zone, a higher grade subinterval of 8.09% eU<sub>3</sub>O<sub>8</sub> over 1.0 m was also encountered.

The eU<sub>3</sub>O<sub>8</sub> grade was estimated in-situ within the drill hole using calibrated down-hole radiometric gamma probes. Samples from hole CB-092-1 (an offcut from hole CB-092 drilled this past winter) have been collected for assay analysis to confirm these equivalent grades. The samples will be analyzed at the Geoanalytical Laboratory at the Saskatchewan Research Council in Saskatoon, Saskatchewan, with results expected in the coming weeks.

*"By intersecting high grades, hole CB-092-1 is the first step in validating our view that a high grade core exists within the Paul Bay Deposit at Christie Lake."* - Roger Lemaire, President & CEO, [UEX Corp.](#)

The objectives of the current exploration program at Christie Lake are to expand the high grade core of the known Paul Bay Deposit and to extend the deposit in the down-dip direction where it appears to be open for expansion (see Figure 1). The depth of the unconformity in the Paul Bay Deposit area is approximately 425 m.

#### About the Christie Lake Project

UEX currently holds a 10% interest in the Christie Lake Project and is working under an option agreement to earn up to a 70% interest. The Project is located approximately 9 km northeast and along strike of Cameco's McArthur River Mine, the world's largest uranium producer. The P2 Fault, the controlling structure for all of the McArthur River deposits, continues to the northeast beyond the mine. UEX believes that through a series of en-echelon steps the northeast strike extension of the P2 Fault not only crosses the Project but also controls the two known uranium deposits on Christie Lake, the Paul Bay and Ken Pen Deposits.

The Paul Bay and Ken Pen Deposits are estimated to host a combined 20.87 million pounds of U<sub>3</sub>O<sub>8</sub> at an average grade of 3.22% U<sub>3</sub>O<sub>8</sub> and were discovered in 1989 and 1993 respectively. This is a historic resource estimation which does not use resource classifications consistent with NI 43-101. The historical resource estimate was presented in an internal report titled Christie Lake Project, Geological Resource Estimate completed by PNC Tono Geoscience Center, Resource Analysis Group, dated September 12, 1997. The historical resource was calculated using a 3 D block model using block sizes of 2 m by 2 m by 2 m, and block grades interpolated using the inverse distance squared method over a circular search radius of 25 m and 1 m height. Specific gravities for each deposit were averaged from specific gravity measures of individual samples collected for assay. UEX plans to complete additional infill drilling on the deposits during the option earn-in period to upgrade these historic resources to indicated and inferred. A qualified person has not done sufficient work to classify the historic estimate as current mineral resources or mineral reserves. UEX is not treating the historic estimate as current mineral reserves or mineral resources.

#### Qualified Persons and Data Acquisition

Technical information in this news release has been reviewed and approved by Roger Lemaire, P.Eng., P.Geo., UEX's President and CEO and Trevor Perkins, P.Geo., UEX's Exploration Manager, who are each considered to be a Qualified Person as defined by National Instrument 43-101.

#### About UEX

UEX (TSX: UEX) (OTC PINK: UEXCF) (FRANKFURT: UXO) is a Canadian uranium exploration and development company involved in sixteen uranium projects, including four that are 100% owned and operated by UEX, one joint venture with AREVA that is operated by UEX, as well as nine joint ventures with AREVA, one joint venture with AREVA and JCU (Canada) Exploration Company Limited, which are operated by AREVA, and one project (Christie Lake) under option from JCU (Canada) Exploration Company Limited and operated by UEX. The sixteen projects are located in the eastern, western and northern perimeters of the Athabasca Basin, the world's richest uranium belt, which in 2015 accounted for approximately 22% of the global primary uranium production. UEX is currently advancing several uranium deposits in the Athabasca Basin which include the Christie Lake deposits, the Kianna, Anne, Colette and 58B deposits at its currently 49.1%-owned Shea Creek Project and the Horseshoe, Raven and West Bear deposits located at its 100%-owned Hidden Bay Project.

#### About JCU

JCU is a private company that is actively engaged in the exploration and development in Canada. JCU is owned by three

Japanese companies. Amongst these, Overseas Uranium Resources Development Co., Ltd. ("OURD") acts as the manager of JCU. JCU has partnerships with UEX, AREVA, Cameco, Denison and others on uranium exploration and development projects in the Athabasca Basin of Northern Saskatchewan including Millennium and Wheeler River and the Kiggavik project in the Thelon Basin in Nunavut.

#### *Forward-Looking Information*

This news release may contain statements that constitute "forward-looking information" for the purposes of Canadian securities laws. Such statements are based on UEX's current expectations, estimates, forecasts and projections. Such forward-looking information includes statements regarding UEX's mineral resource and mineral reserve estimates, outlook for our future operations, plans and timing for exploration activities, and other expectations, intentions and plans that are not historical fact. The words "estimates", "projects", "expects", "intends", "believes", "plans", "will", "may", or their negatives or other comparable words and phrases are intended to identify forward-looking information. Such forward-looking information is based on certain factors and assumptions and is subject to risks, uncertainties and other factors that could cause actual results to differ materially from future results expressed or implied by such forward-looking information. Important factors that could cause actual results to differ materially from UEX's expectations include uncertainties relating to interpretation of drill results and geology, additional drilling results, continuity and grade of deposits, participation in joint ventures, reliance on other companies as operators, public acceptance of uranium as an energy source, fluctuations in uranium prices and currency exchange rates, changes in environmental and other laws affecting uranium exploration and mining, and other risks and uncertainties disclosed in UEX's Annual Information Form and other filings with the applicable Canadian securities commissions on SEDAR. Many of these factors are beyond the control of UEX. Consequently, all forward-looking information contained in this news release is qualified by this cautionary statement and there can be no assurance that actual results or developments anticipated by UEX will be realized. For the reasons set forth above, investors should not place undue reliance on such forward-looking information. Except as required by applicable law, UEX disclaims any intention or obligation to update or revise forward-looking information, whether as a result of new information, future events or otherwise.
