The Treasure Mtn. Silver Project covers geologically prospective ground in the Similkameen and / or New Westminster Mining Divisions. The Project is adjacent to Nicola Mining Inc.'s Treasure Mountain property, site of the historic Treasure Mountain Silver-Lead-Zinc Mine (polymetallic veins). The Project also occurs within the Intermontane Tectonic Belt, which hosts numerous porphyry copper deposits. The Project covers an area of approximately 9500 hectares and hosts seven gold, silver, lead, zinc and / or copper occurrences in various regions as reported in the B.C. Ministry of Energy and Mines MINFILE database. These include gold-quartz vein, polymetallic vein and porphyry type occurrences. Some of these mineral occurrences have associated historic underground workings.

Further details will be provided in a future news release if and when New Destiny and Ximen execute a letter of intent in respect of the Proposed Transaction.
