

# Carbon Energy Limited: Signs Terms to License keyseam(R) for 30MW Indonesian Power Project

23.08.2016 | [ABN Newswire](#)

Brisbane - [Carbon Energy Ltd.](#) (ASX:CNX) (OTCMKTS:CNXAY) today announced it had signed a non-binding term sheet with Ascot Energy Pte Ltd (Ascot Energy) to license its keyseam technology and services to develop a modular 30MW capacity syngas fuelled power project in Indonesia (Term Sheet).

- Technology licence fee US\$10 million plus services and royalties
- Supports growth and diversification beyond China and Queensland

Ascot Energy, a Singapore based clean energy company plans to become the leading syngas power generation company in Indonesia and South East Asia. It proposes to replicate Carbon Energy's Bloodwood Creek project which it believes matches the requirements for its planned projects in Indonesia.

The Term Sheet outlines a two stage project with the initial design and construction of a single keyseam panel, followed by the development of additional panels sufficient to generate up to 30MW in capacity.

Ascot Energy, who has a well established network of relevant local contacts, is responsible for securing permits and approvals for the project. The granting of these approvals will trigger the commencement of the legally binding licensing and service agreements between the parties in relation to the keyseam technology. Carbon Energy may provide paid services in order to assist Ascot Energy in securing necessary approvals.

Subject to the parties entering into the legally binding licensing and servicing agreements, Carbon Energy will receive the following revenue and royalties as set out in the Term Sheet:

- Ascot Energy to pay a licence fee for each project of US\$10 million in two tranches
  - US\$4 million when funding is secured for the project
  - US\$6 million on performance criteria being met in accordance with the licence and services agreements.
- A royalty payment of production of US\$0.30 per MMBTU of syngas
- Pre-project services fees

The project timeline estimates up to 18 months to secure permits and a further 18 months from then to achieve ignition of the first panel.

Executive Chairman, Chris Rawlings was encouraged by the signing of the Terms, "This agreement recognises that Carbon Energy's keyseam technology is the preferred way to grow UCG production in a safe and environmentally responsible way." Dr Rawlings said.

Ascot Energy, Managing Director Kevin Garner said "there is a clear need for an affordable alternative environmentally sound power source in Indonesia. The Indonesian government recognises the potential of in-situ coal gasification and continues to put in place the framework for project development; however there remains a knowledge gap relating to the technology and environmental management and compliance.

"In cooperating with Carbon Energy on a coal to syngas to power project, we believe there is an opportunity to bridge this gap. The success and experience gained at Bloodwood Creek project stands to benefit both local industry and the community," Mr Garner said.

## About Carbon Energy Limited:

Carbon Energy (ASX:CNX) (OTCMKTS:CNXAY) is building a gas business, utilising its unique keyseam technology. The Company is committed to providing industrial gas users with an affordable and secure source of high quality feedstock, as gas prices remain strong, through increased demand across our key markets.

Carbon Energy is the only company to complete a full-lifecycle, commercial scalable underground gasification trial. The Company's keyseam technology has successfully accomplished all the recommendations outlined by the Queensland government's Independent Scientific Panel (ISP) which included intense, independent environmental scrutiny.
