Vancouver, British Columbia--(Newsfile Corp. - September 23, 2016) - Sienna Resources Inc. (TSXV: SIE) (FSE: A1XCQ0) (OTCBB: SNNAF) wishes to announce that representatives of the company will be presenting at the MINExpo in Las Vegas, September 26-28 at the Las Vegas Convention Centre. The show is held every four years and is one of the largest mining shows in the world, with attendance expected over 25,000. Management welcomes all shareholders to come and speak with President Jason Gigliotti in person at the show.

Sienna Resources has also recently been cleared by FINRA and is now fully quoted on the OTC Markets under the new symbol SNNAF.

Jason Gigliotti, President of Sienna Resources Inc. stated, "We are pleased to be presenting at one of the largest single concentrations of mining industry experts and investors in the world. We are excited to present our Clayton Valley Deep Basin Lithium Brine Project at this show, especially in light of the show being in the direct vicinity of our property and Tesla's Gigafactory. We are also very pleased to have heard that our neighbour, Pure Energy has had more success on their recent deep drill program. The most significant aspect being that this was Pure's deepest drilling to date and ended in brine at depth. Considering Sienna's property is located in the deepest sections of this basin, we are very optimistic about our planned future work program and that our premise of the brine sinking to the bottom of the basin is receiving more positive evidence."

The President adds, "We are also very fortunate to be able to engage GeoXplor, who have the most intimate knowledge of Clayton Valley. The GeoXplor team have been instrumental with the development and discovery regarding the lithium brine deposit that Pure Energy Minerals Ltd. has, and we look forward to utilizing their experience and expertise to develop our Clayton Valley Deep Basin Lithium Brine Project. GeoXplor has proven to be the preeminent Clayton Valley lithium brine discovery team. We are very excited to start up our program as Sienna is located in the deepest sections of the basin that holds the only lithium development in Nevada."

Sienna's "Clayton Valley Deep Basin Lithium Brine Project" is located directly between and bordering Pure Energy Minerals Ltd. and Lithium X Energy Corp. The "Clayton Valley Deep Basin Lithium Brine Project" is located in parts of the deepest sections (refer to the map) of the only lithium brine basin with a producing operation in North America (Albemarle's Silver Peak Mine).

John Rud M.Sc. Geologist and a Principal of GeoXplor Corp states that "We look forward to working with the Sienna team as their project is located in the deepest sections of the Clayton Valley Basin, the only producing lithium brine basin in North America, with no company to date, testing these deeper sections. Their (Sienna's) efforts in this regard is something we are very excited about."
