

VANCOUVER, BC / ACCESSWIRE / September 27, 2016 / [Minaurum Gold Inc.](#) (TSXV: MGG) ("Minaurum") is pleased to announce the results of initial rock sampling and the commencement of an exploration program at its La Quintera Silver Project.

Historical exploration work on the project included taking 334 rock samples of which 97 assayed 100-1,380 grams per tonne ("g/t") Silver ("Ag") and 106 returned values 30 - 100 g/t Ag. Minaurum's initial sampling confirmed the prior range of high-grade assay results along with the addition of significant base metal grades. Highlights include: 1.0 metre of 1,020 g/tsilver, 1.11% copper, and 0.52% zinc; 2 metres of 427 g/t silver, 0.33% lead and 0.42% zinc; and 2.5m of 232 g/t silver, 1.24% lead and 0.43% zinc.

Minaurum has also commenced an extensive exploration program including the survey of old mine workings, detailed geologic mapping, rock sampling, and the interpretation of structural geology and geochemical zonation.

"We are very pleased to receive high grade results right at the outset of our initial sampling program at La Quintera," stated Darrell Rader, President and CEO. "We have now commenced an exploration program to locate further high grade silver zones and to define drill targets."

Table 1. Initial sampling collected at La Quintera by Minaurum.

Samp No	Sample Type	Width (m)	Ag g/t	Au g/t	Cu%	Pb%	Zn%	*AgEq g/t
100398	Outcrop	2	90	0.001	0.02	0.01	0.07	94
100400	Outcrop		130	0.037	0.31	0.57	0.48	184
101099	Outcrop	2	139	0.079	0.14	0.19	0.51	176
101129	Outcrop	2	427	0.096	0.32	0.33	0.42	478
101130	Outcrop	1.2	101	0.054	0.28	0.03	0.02	125
101131	Dump	1	400	0.462	1.08	1.22	8.5	815
101133	Adit	2.5	232	0.02	0.58	1.24	0.43	320
101135	Adit	1	1020	0.032	1.11	0.19	0.52	1118

*AgEq values calculated on basis of USD prices: Ag: \$19.70/troz, Au: \$1,345/troz, Cu: \$2.10/lb, Pb: \$0.86/lb, Zn: \$1.04/lb.

La Quintera is 45 km northwest of Pan American's Alamo Dorado silver mine, and 15 km south of Cobre Del Mayo's Piedras Verdes copper mine. The project hosts a high-grade epithermal vein system, which is estimated to have produced in excess of 120 Moz of silver from 1680 to the early 1900s from several historic mines. The project has excellent infrastructure and is fully permitted from exploration through production.

Stephen R. Maynard, Vice President of Exploration of Minaurum and a Qualified Person as defined by National Instrument 43-101, collected the samples listed in this report (except for those stated as being historical), reviewed and verified the assay data and has approved the disclosure in this News Release. The listed samples were personally sealed and delivered to the ALS Chemex sample-preparation facility in Hermosillo, Sonora, Mexico. ALS Chemex prepared the samples, crushing them to 70% less than 2mm, splitting off 250g, and pulverizing the split to more than 85% passing 75 microns. The resulting sample pulps were then sent to ALS Chemex's analytical laboratory in North Vancouver, BC, Canada for assay. Analysis was done for 48-elements (including silver) by a 4-acid digestion and inductively coupled plasma atomic emission spectroscopy (ICP-AES). Sample pulps with silver values greater than 100 g/t; and copper, lead, or zinc values greater than 10,000 ppm (1%) were re-analyzed using 4-acid digestion and atomic absorption spectrometry (AAS). Samples were analyzed for gold using fire assay and ICP-AES.

Minaurum Gold is a regional explorer focusing on the exploration and development of high-grade gold and silver projects in Mexico. The Company is led by an experienced exploration and finance team credited with several district-scale discoveries.
