

TORONTO, ONTARIO--(Marketwired - Nov 28, 2016) - [Potash Ridge Corp.](#) ("Potash Ridge" or "the Corporation") (TSX:PRK), a near term producer of premium SOP fertilizer in North America, is pleased to announce a multi-faceted cooperative relationship with Migao Corporation ("Migao") to assist in the development and operation of the Corporation's Valleyfield sulphate of potash fertilizer project in Quebec ("Valleyfield").

Migao, a leading sulphate of potash ("SOP") producer with 320,000 tonnes per year of production capacity across China, has agreed to provide technical, construction, commissioning, operations, and maintenance support services to Valleyfield for its 40,000 tonne-per-year SOP project. Migao will be responsible to procure equipment sourced in China and provide performance guarantees on all such equipment.

Migao's technical, procurement, construction and commissioning support will complement Valleyfield's previously announced engineering program through an Engineering, Procurement and Construction agreement.

"Having a partnership with Migao significantly de-risks the project from the design phase through to operations utilizing their 20 years of development and operational expertise to ensure best of class design, construction, and operations," said Guy Bentinck, Potash Ridge's President and CEO. "We are fortunate to be able to benefit from the long standing relationship between Migao and the founder of Valleyfield Fertilizer to ensure best of class technology for our Quebec-based project."

SOP is the world's most popular low-chloride fertilizer. It is beneficial to soils and plants, and is considered one of the world's most important specialty potash fertilizers. Combining potassium and sulphur, SOP provides a high concentration of nutrients for plants. Its low chloride content makes it the ideal potash-based fertilizer for high value crops, and for soils at risk to salinity.

#### About Potash Ridge

Potash Ridge's strategy is to become a premier producer of sulphate of potash or SOP in North America. The Corporation owns two SOP projects: the Valleyfield Project that plans to produce SOP through the Mannheim Process; and the Blawn Mountain Project in Utah that plans to produce SOP by processing an alunite material. Potash Ridge has a highly qualified and proven management team in place with significant financial, project management and operational experience and the ability to take projects into production.

#### Forward-Looking Statements

*This press release contains forward-looking statements, which reflect the Corporation's expectations regarding future growth, results of operations, performance and business prospects. These forward-looking statements may include statements that are predictive in nature, or that depend upon or refer to future events or conditions, and can generally be identified by words such as "may", "will", "expects", "anticipates", "intends", "plans", "believes", "estimates", "guidance" or similar expressions. In addition, any statements that refer to expectations, projections or other characterizations of future events or circumstances are forward-looking statements. These statements are not historical facts but instead represent the Corporation's expectations, estimates and projections regarding future events. Forward-looking statements are necessarily based upon a number of estimates and assumptions that, while considered reasonable by the Corporation, are inherently subject to significant business, economic and competitive uncertainties and contingencies. Known and unknown factors could cause actual results to differ materially from those projected in the forward-looking statements. Such factors include, but are not limited to: the future financial or operating performance of the Corporation and its subsidiaries and its mineral projects; the anticipated results of exploration activities; the estimation of mineral resources; the realization of mineral resource estimates; capital, development, operating and exploration expenditures; costs and timing of the development of the Corporation's mineral projects; timing of future exploration; requirements for additional capital; climate conditions; government regulation of mining operations; anticipated results of economic and technical studies; environmental matters; receipt of the necessary permits, approvals and licenses in connection with exploration and development activities; appropriation of the necessary water rights and water sources; changes in commodity prices; recruiting and retaining key employees; construction delays; litigation; competition in the mining industry; reclamation expenses; reliability of historical exploration work; reliance on historical information acquired by the Corporation; optimization of technology to be employed by the Corporation; title disputes or claims and other similar matters.*

*If any of the assumptions or estimates made by management prove to be incorrect, actual results and developments are likely to differ, and may differ materially, from those expressed or implied by the forward-looking statements contained herein. Such assumptions include, but are not limited to, the following: that general business, economic, competitive, political and social uncertainties remain favorable; that agriculture fertilizers are expected to be a major driver in increasing yields to address demand for premium produce, such as fruits and vegetables, as well as diversified protein rich diets necessitating grains and other animal feed; that actual results of exploration activities justify further studies and development of the Corporation's mineral projects; that the future prices of minerals remain at levels that justify the exploration and future development and operation of the Corporation's mineral projects; that there is no failure of plant, equipment or processes to operate as anticipated; that accidents, labour disputes and other risks of the mining industry do not occur; that there are no unanticipated delays in obtaining governmental approvals or financing or in the completion of future studies, development or construction activities; that the actual costs of exploration and studies remain within budgeted amounts; that regulatory and legal requirements required for exploration or development activities do not change in any adverse manner; that input cost assumptions do not change in any adverse manner, as well as those factors discussed in the section entitled "Risk Factors" in the Corporation's Annual*

*Information Form (AIF) for the year-ended December 31, 2015 found on [sedar.com](http://sedar.com). The Corporation disclaims any intention or obligation to update or revise any forward-looking statements whether as a result of new information, future events or otherwise, except as required by applicable law.*
