

# White Cliff Minerals Ltd.: Lithium Tenement Granted at Lake Percy

10.01.2017 | [ABN Newswire](#)

Perth - [White Cliff Minerals Ltd.](#) (ASX:WCN) ("White Cliff" or the "Company") is pleased to report the grant of a 20 km<sup>2</sup> tenement immediately North and adjacent to the Lake Percy Joint Venture tenement where Liotontown Resources recently identified a 2km long anomalous lithium trend.

## Highlights:

- White Cliff Minerals Acquires 100% of Tenement (E63/1793) Adjacent to Lake Percy Lithium Trend
  - Previous exploration identified numerous pegmatites in existing drilling and mapping
  - No lithium assays undertaken
  - Soil sampling program starting in February
- 2km Lithium Trend identified on White Cliff Minerals Lake Percy Joint Venture Tenement (E63/1222i)
  - Liotontown Resources earning 70% via staged expenditure of \$1.75 Million
  - Liotontown to commence drilling in February

Historical exploration on the tenement E63/1793 (see Figure 1 in the link below) identified pegmatites both in outcrop and on drill holes but no lithium assaying was undertaken.

Given the recent discovery of lithium containing pegmatites at Mt Day and the highly anomalous lithium soil geochemistry reported at the Lake Percy Joint Venture Tenement (see Figure 2-3 in the link below) by Liotontown Resources (LTR) the Company will undertake a comprehensive soil sampling program in February.

## Liotontown Identifies 2km Long Lithium Trend

The anomalous trend, which contains values of up to 354ppm Li<sub>2</sub>O, has been outlined over a strike length of 2km and is coincident with pegmatites which locally exceed 100m true thickness (see Figure 2 in the link below).

Lake Percy is located ~440km east of Perth near Poseidon Nickel's Lake Johnson/Maggie Hayes treatment plant in WA. It is also just 60km from the world-class Earl Grey lithium deposit discovered by Kidman Resources.

This emerging Forrestania Lithium Province also includes the Mt Cattlin spodumene mine (currently being commissioned by Galaxy Resources) and the Mount Day lithium discovery, which is located 20km to the south in the same greenstone belt as Lake Percy (see Figure 3 in the link below).

In light of the strong anomaly identified at Lake Percy, Liotontown has scheduled a maiden RC drilling program to start early February.

## Lake Percy Joint Venture Agreement

In 2016 Liotontown Resources ("Liotontown") (ASX:LTR) agreed to a binding joint venture arrangement to explore the Company's Lake Percy tenement (E63/1222) for lithium and other minerals in a rapidly emerging lithium province in the Lake Johnson-Forrestania district of Western Australia.

Under the joint venture, Liotontown can earn up to 70% equity in the 41km<sup>2</sup> Lake Percy tenement (EL63/1222i) located approximately 430km east of Perth Western Australia (see Figure 3 in the link below).

Under the terms of the Joint Venture Liotontown may acquire up to 70% of the Lake Percy Project by:

- spending A\$1,000,000 on exploration within 3 years to earn 51% equity;

- at Liontown's election, it can increase its equity to 70% by spending an additional A\$750,000 before the 4th anniversary of the JV Agreement execution; and
- by committing to spending \$50,000 on exploration before having the right to withdraw from the joint venture.

#### **About White Cliff Minerals Ltd:**

[White Cliff Minerals Ltd.](#) (ASX:WCN) is a Western Australian based exploration company with the following projects:

**Chanach Copper-Gold Project (89%):** The Project contains extensive porphyry related gold and copper mineralisation starting at the surface and extending over several kilometres. Drilling during 2014 has defined a major gold discovery with an initial inferred resource of 1.15Mt at 4.2 g/t containing 156,000 ounces of gold. Drilling has also defined a significant copper deposit at surface consisting of 10Mt at 0.41% copper containing 40,000 tonnes of copper. Drilling in 2015 identified extensions of the known mineralisation over an additional 900 metres of strike with multiple intersections greater than 1 ounce per tonne (31.1 g/t) gold. Extensive mineralisation occurs around both deposits demonstrating significant expansion potential. The project is located in the Kyrgyz Republic, 350km west-southwest of the capital city of Bishkek and covers 83 square kilometres. The Chanach project is located in the western part of the Tien Shan Belt, a highly mineralised zone that extending for over 2,500 km, from western Uzbekistan, through Tajikistan, Kyrgyz Republic and southern Kazakhstan to western China.

**Merolia Project (100%):** The project consists of 771 square kilometres of the Merolia Greenstone belt and contains extensive ultramafic sequences including the Diorite Hill layered ultramafic complex, the Rotorua ultramafic complex, the Coglia ultramafic complex and a 51 kilometre long zone of extrusive ultramafic lava's. The Intrusive complexes are prospective for nickel-copper sulphide accumulations possibly with platinum group elements, and the extrusive ultramafic rocks are prospective for nickel sulphide and nickel-cobalt accumulations. The project also contains extensive basalt sequences that are prospective for gold mineralisation including the Ironstone prospect where historical drilling has identified 24m at 8.6g/t gold.
