Nortec Minerals provides Update - Avalon Minerals proceeding with Stage 2 Exploration, Tammela Gold and Lithium Project

15.03.2017 | The Newswire

Vancouver, March 15, 2017 - Nortec Minerals Corp. (the "Company" or "Nortec") (TSXV: NVT) is pleased to announce that the Company's Joint Venture earn-in partner, Avalon Minerals ("Avalon") of Milton, QLD, Australia, is proceeding with the one million Euro (EUR1,000,000) Stage 2 exploration program to earn an additional 29% interest in the Satulinmaki and Riukka gold prospects and the Kietyonmaki lithium prospect, collectively known as the Tammela Project, Southern Finland. Avalon is making a cash payment of EUR200,000 to Nortec as part of the requirement of proceeding with Stage 2 program. Avalon completed Stage 1 program and holds a 51% interest in the project. Avalon and Nortec will form an 80:20 Joint Venture on completion of Stage 2 program.

The results from Avalon's drilling, together with the historical drilling results of the Finnish Geological Survey, exhibit a large gold system and a significant lithium prospect (Re: Nortec's press releases dated 20 February 2017). Avalon's press releases can be referred to on:

http://www.asx.com.au/asx/share-price-research/company/AVI, http://avalonminerals.com.au/

Title transfers from Tammela Minerals Oy (TamOy), the wholly-owned subsidiary of Nortec, to two Joint Venture (JV) holding companies, Kultatie Oy for the Somero 1 to 12 claims (Riukka and Satulinmaki gold zones) and Litiumloydos Oy for Tammela 1 to 3 claims (Kietyonmaki lithium prospect) is being completed. TamOy will own a 49% interest in the JV companies. TamOy also staked the Rehumaki exploration reservation over an area of 117 km2 around the Somero and Tammela claims. This reservation forms part of the Joint Venture with Avalon.

The Stage 2 work program will comprise of an IP survey, ongoing geological mapping and preparation for an approximately 2000 metre drilling program at Satulinmaki gold prospect and compilation of data at the Kietyonmaki lithium prospect.

Satulinmaki and Riukka Gold Prospect Summary

The results from Avalon's drilling together with the historical drilling results of the Geological Survey of Finland show a large gold system of broad mineral zones and sub-parallel narrow veins. The system is open in all directions and has a length of at least 400m, a vertical extent of at least 150m and ranges up to approximately 50m thick See Nortec news release of February 20, 2017 for details

A detailed Induced Polarization (IP) program covering the immediate Satulinmaki area is in progress with a second phase of drilling expected once the IP data has been interpreted and compiled with previous drilling and survey results. Detailed structural studies are being carried out at the Satulinmaki and Riukka prospects to assist with ongoing drill planning.

Kietyonmaki Lithium Prospect Summary

As previously reported, the Kietyonmaki lithium prospect was discovered by the Finnish Geological Survey (GTK) in the mid - 1980's. Lithium mineralization at Kietyonmaki is hosted in a spodumene-bearing pegmatite dyke swarm. GTK drilled seventeen shallow diamond drill holes to test down to 70m below surface across three traverses, including one traverse of very shallow holes to identify bedrock. Six diamond drill holes have been drilled by Avalon confirming a high grade spodumene-bearing pegmatite dyke swarm.
