

Nevada Clean Magnesium Inc.: Bench Pilot Furnace Fabrication Completed

04.04.2017 | [The Newswire](#)

VANCOUVER, April 4, 2017 - [Nevada Clean Magnesium Inc.](#) (TSXV: NVM; Frankfurt-M1V; OTC Pink Sheets: MLYFF) (the "Company") is pleased to announce the completion of the bench scale test furnace. This work was performed by Lindon Acres Enterprises of Fort St John, British Columbia.

Originally scheduled for early 2016 with the process testing to follow, it was decided to delay the larger scale test until the materials assessment program was completed by the University of Colorado at Boulder. Included with this work was the confirmation of an alternate reductant.

Grinding and calcination systems are being installed in order to prepare the materials necessary to produce magnesium metal crowns with the furnace. These crowns will be remelted into magnesium buttons for quality and certification purposes.

James Sever, P. Eng., COO states "This testing program will provide necessary engineering data for fabrication and operation of the planned full size pilot furnace. One key area of assessment is the ability to recover energy from the spent furnace residue. Due to the unique design of the furnace, alternate heating and condensing concepts can be tested with the hope of producing a continuous silicothermic process."

The final issuance of 1,000,000 common shares of the company as payment for services, will be made on or before April 15, 2017. The payment terms can be viewed from the previous announcement dated October 6, 2015.

About Nevada Clean Magnesium, Inc.

Nevada Clean Magnesium is focused on becoming a major U.S. producer and distributor of primary, high grade, low cost magnesium metal extracted from its 100% owned Tami-Mosi property located in North Central Nevada. Based on the Company's NI 43-101 Preliminary Economic Assessment Report published in September 2011 and amended in July 2014, the Tami-Mosi Project has an inferred resource of 412 million tonnes with an average grade of 12.3% Mg for a contained metal content of 111 billion pounds of magnesium using a 12% cut-off grade contained within a high purity dolomite block.
