

Cobalt Power Group Announces Investor Relations Engagement

18.04.2017 | [CNW](#)

VANCOUVER, April 18, 2017 - [Cobalt Power Group Inc.](#) (the "Company") (TSX.V: CPO) is pleased to announce engaging the services of Brisco Capital Partners Corporation as part of its 2017 investor relations strategy. Brisco Capital is an investor relations consultancy that acts as a communication bridge between public equities and the investment community.

Pursuant to an investor relations agreement executed between the parties, Brisco Capital has been retained for a six month period. They will be engaged to: (i) assist with building, budgeting, and implementing the Company's investor relations plan, (ii) coordinate road shows for management targeting strategic investment areas, and (iii) advise on presentation and investor relations material. As well, Brisco Capital will counsel Cobalt Power Group on its website and internet presence and will include the Company on its website: www.brisco-capital.com.

Under the terms of the investor relations agreement, Brisco Capital will receive remuneration in the amount of \$7,500 per month.

About Cobalt Power Group Inc.

[Cobalt Power Group Inc.](#) is a publicly traded Canadian exploration company listed on the TSX-Venture Exchange (TSX-V: CPO) focused on cobalt exploration and development.

The Company has made a series of strategic property acquisitions over the past year, seeking cobalt mineralization near Cobalt, Ontario - a region with a long history of silver and associated cobalt production. Property holdings total 826.4 hectares (2042 acres) in contiguous and strategic claim blocks. There are several historic mining operations on the properties that are potentially accessible, including the Smith Cobalt shaft and its underground workings.

About the Smith Cobalt Project

The Smith Cobalt project is underlain by a sequence of Archaean volcanics which are unconformably overlain by Huronian sediments. These formations have been intruded by the Proterozoic-age Nipissing diabase sill. Faulting, on both a regional and local scale, has been found by surface mapping and in drill cores. Polymetallic veining, and especially pinkish-white carbonate veins, has also been reported. Thus, all the necessary geological components of accepted mineralization models for cobalt-silver have been identified on the properties.

Chris M. Healey, P. Geo, V.P. Exploration, and a Director of Cobalt Power Group is the qualified person responsible for the technical content of this release, and consents to its dissemination.
