

FORUM: Explor Resources Inc. - Timmins Porcupine West Drilling?

26.07.2017 | [ABN Newswire](#)

The most recent information in regards to the drill core analysis is that we are close to seeing some preliminary results. Apparently, the lab has lost a key staff member recently, which has set their entire testing system back a couple of weeks. New supervisory staff have stepped in to bridge the gap, and they are doing their utmost to deal with the increased work load. The lab has been pushing for 'the end of this month', and we can only hope they will be true to their word.

A number of additional information requests have been processed, initiated by potential suitors to the Timmins Porcupine West GOLD Deposit. I would suspect they are as anxious to see the results of the recent 3,000 meter drill campaign as we all are. Although the concentrated deepening and step-out drilling was focussed at the eastern end of the deposit, the results could put a very optimistic spin on the remainder of the GOLD Deposit, given similarities over the entire known 2,000 meter Strike Length, and similarities encountered at depth. Given the preliminary visuals of pyritic concentrations where they were expected, associated GOLD values could lead to some very interesting lobbying for the deposit.

So, we will undoubtedly see a News Release outlining the results of the drilling, and at least a couple of proposals from established local GOLD producers. That should be music to any investor's ears. Hang in there, everyone. This could be exciting.
