

# Fremont Gold Ltd. Commences Trenching Program at Hurricane Project, Nevada

25.10.2017 | [Newsfile](#)

Vancouver, October 25, 2017 - [Fremont Gold Ltd.](#) (TSXV: FRE) ("Fremont" or the "Company") is pleased to announce that it has received permission from the Bureau of Land Management to carry out a program of trenching at the Hurricane property in Lander County, northern Nevada. A local contractor has been engaged and work will begin at the end of this week with a minimum of 1,600m of mechanized trenching planned, and expected to last until mid-November 2017.

The Hurricane project is located on the Cortez gold trend in northern Nevada, approximately 14km northwest along strike from Barrick Gold's Pipeline & Cortez mines which have total historical and current resources of approximately 32M oz, and collectively produced 1.06M oz Au in 2016<sup>1</sup>. Hurricane is also located 3km west of Barrick Gold's undeveloped Hilltop deposit.

Hurricane was partially tested by Pegasus in 1986-1987 through a program of shallow RC drilling. Nineteen of 35 holes intersected near-surface gold mineralization including: 16.8m at 2.86 g/t, 12.2m at 2.32 g/t, 15.2m at 1.65 g/t and 3.1m at 6.91g/t Au. Previous work has defined a 750m X 400m NW-SE trending mineralized area which is elongated parallel to the Cortez trend. The zone is open to both the southeast and northwest. Historical trench results from the same period returned several gold-bearing intervals including 15.2m at 2.6 g/t within a larger zone of 45.7m at 1.2 g/t Au<sup>2</sup>.

Potential for defining new mineralization exists at depth and along strike.

The Company plans to expand the previously trenched area in order to get a better understanding of structural controls on mineralization and confirm the historical results, prior to drilling. Results from sampling are expected within four weeks from completion of the trenching program.
