

# **Rockcliff to Update National Instrument 43-101 Resource at Talbot Additional Geophysical Survey Warranted below Talbot Deposit**

15.11.2017 | [FSCwire](#)

Toronto, Ontario (FSCwire) - [Rockcliff Metals Corp.](#) ("Rockcliff" or the "Company") (TSX.V: (FRANKFURT: RO0, WKN: A2H60G) is pleased to announce it has initiated an updated National Instrument (NI) 43-101 estimate at the Talbot Copper Property. The resource will be completed by SRK Consulting. Rockcliff will also initiate a geophysical survey where previous geophysics outlined the West Talbot Deep Conductive Plate, a large untested anomaly strengthening below and west of the Talbot Copper Deposit (see Figure 1). The Talbot Copper Property is part of the Company's Manitoba property portfolio centered on the Snow Lake Mining Camp within the prolific Flin Flon-Snow Lake Greenstone Belt.

*Please view the longitudinal image on the following page for additional information.*

Rockcliff President and CEO commented, "We are excited about updating the present resource on the Talbot Copper Deposit after our phase 2 drill program identified additional areas of high grade enrichment in the hanging wall and along the present resource. The additional DPEM geophysical survey will help us vector in on the exact up dip location of the Talbot Deep Conductive Plate. The Talbot Copper Deposit was originally identified as a smaller geophysical conductive plate, any new larger plates identified in this area are viewed as high priority targets. Both the resource update and geophysical survey are anticipated to be completed prior to the end of the year and data will be released when results are available. Planned drilling in 2018 will aid our advancement of the Talbot Copper Property and further define the potential size of the Talbot Copper Deposit."

Present Talbot Copper Deposit NI 43-101 Resource Completed January 25, 2016:

On February 4, 2016, Rockcliff announced on the Talbot Copper Property an Inferred Mineral Resource as set out in the National Instrument 43-101 "Standards of Disclosure for Mineral Projects" (NI 43-101) technical report dated January 25, 2016 and titled "Technical Report on the Talbot Property, Manitoba, Canada" (the "Technical Report"), a copy of which is available on the Company's SEDAR profile at [www.sedar.com](http://www.sedar.com), in respect of the Mineral Resource Estimate prepared by Roscoe Postle Associates Inc. ("RPA") for the Talbot Copper Deposit located on the Talbot Copper Property in central Manitoba.

The Inferred Mineral Resource Statement prepared by RPA for the Talbot deposit is detailed below.

Mineral Resource Statement, Talbot Deposit, Manitoba, RPA, January 26, 2016

Zone	Tonnes (kt)	Grades				Contained Metal			
		Cu (%)	Au (g/t)	Zn (%)	Ag (g/t)	Cu (Mlb)	Au (koz)	Zn (Mlb)	Ag (koz)
Talbot Main	1,441.0	3.4	2.6	2.4	61.0	107.0	118.6	76.4	2,827.8
Talbot FW	443.9	2.2	2.0	2.4	55.6	22.0	28.5	23.2	793.8
North Lens	283.4	0.7	2.0	1.3	20.6	4.6	18.3	7.9	187.6
Total	2,168.3	2.8	2.4	2.2	54.6	133.6	165.4	107.4	3,809.3

\*Copper Equivalent (CuEq) = Cu grade + ((Zn grade%/100 x Zn price) + (Au grade gpt x Au price/gram) + (Ag grade gpt x Ag price/gram))/Cu price x 100. The numbers may not add up due to rounding.

Rockcliff can earn a 51% interest in the Talbot Property from [HudBay Minerals Inc.](#) Please refer to the news release dated February 4, 2016.

11, 2016 for specific terms of the option agreement.

Ken Lapierre P.Ge., President and CEO of Rockcliff, a Qualified Person in accordance with Canadian regulatory requirements set out in NI 43-101, has read and approved the scientific and technical information that forms the basis for the disclosure contained in this press release.

#### About Rockcliff Metals Corporation

On November 1, 2017 Rockcliff Copper Corporation changed its name to [Rockcliff Metals Corp.](#). The change of name reflects the polymetallic nature of the Company's high-grade VMS properties that comprise copper, gold, zinc and silver.

Rockcliff is a Canadian resource exploration company focused on the discovery, advancement and consolidation of a portfolio of the highest grade, undeveloped metal deposits in the prolific Flin Flon & Snow Lake Greenstone Belt located in central Manitoba. The Company's current portfolio of projects, totalling in excess of 45,000 hectares, is located in and around the Snow Lake mining camp and hosts the highest grade undeveloped NI 43-101 compliant copper deposits (the gold-rich Lorne copper deposit and the Rail copper deposit), and the highest grade undeveloped historical zinc deposits (the Lon zinc deposit, the Bur zinc deposit, the Morgan zinc deposit and the down dip continuation of the Pen zinc deposit). The Company's portfolio also includes Manitoba's first and highest grade former lode gold producer (Laguna gold property), three additional gold properties (SLG gold property, DSN gold property and Berry Creek gold property), a Net Smelter Royalty on the Tower Hill deposit (the T-1 copper deposit) and the optioned near surface high grade MacBride zinc deposit located north of Snow Lake near Snow Lake Rapids, Manitoba.
