

Pilley's Island Trench Samples Return up to 27.5% Zinc, 20.0% Lead, 8.36% Copper and 63.4 g/t Silver, North-Central Newfoundland

16.11.2017 | [FSCwire](#)

Vancouver, British Columbia (FSCwire) - [Great Atlantic Resources Corp.](#) (TSXV:GR) (the "Company" or "Great Atlantic") is pleased to announce it has received initial analytical results for rock samples collected during a recent trenching program at its Pilley's Island Base Metal & Precious Metal Property, located in north-central Newfoundland. The exploration program was jointly operated with option partner Unity Resources. Rock grab samples collected from the trenches returned up to 27.5% Zn, 20.0% Pb, 8.36% Cu and 63.4 g/t Ag. Great Atlantic and Unity Resources are planning a diamond drilling program on the property to commence in late November. The property hosts an historic copper mine along with several zinc, lead, copper (+ / - gold, silver) occurrences.

One area of recent trenching was the Bull Road showing. Previous historic work included trenching and drilling with 7 holes sunk on the showing. Reported historic trench samples at Bull Road include 12.42% Zn, 3.87% Cu, 0.95% Pb and 0.71 oz./ton Ag over 4.6m. One historic drill hole at this showing was reported to intersect 22.2% Zn, 4.4% Pb, 0.1% Cu and 0.96 oz./ton Ag over 0.65m core length within an intersection of 7.85m grading 0.66% Cu, 0.51% Pb, 3.41% Zn and 0.34 oz./ton Ag. The recent trenching program included re-opening and re-evaluating the historic Bull Road Showing.

Trenching along the trace of the Bull Road Showing exposed mineralization over a length of 130m with a width varying between 1-7m. The Bull Road Showing is a polyolithic slump breccia of volcanogenic massive sulphide mineralization containing massive sulphide clasts up to greater than a metre in length.

Rock grab samples taken from selected styles of mineralization during the current program are presented in the table below.

SAMPLE NUMBER	Cu %	Pb %	Zn %	Ag g/t	Sb %	Description
254513	8.36	0.01	0.14	15.5	---	High Cu massive sulphide clast
254514	5.78	20.00	27.50	63.4	0.30	Zn-Pb rich massive sulphide clast
254515	0.48	0.01	0.05	4.7	---	Massive Py-Quartz clast
254516	0.51	0.55	1.15	6.5	---	Matrix mineralization
254517	2.02	6.50	16.40	41.7	---	Massive Sulphide clast

The Bull Road showing will be targeted during the upcoming diamond drill program.

The Pilley's Island Property hosts an historic mine with reported historic estimated reserves of 1.159 million tonnes grading 1.23% Cu or 627,373 tons at 2.34% Cu and 0.01 oz./ton Au. This volcanogenic massive sulphide deposit is analogous to Kuroko/Buchans style mineralization. The Property also hosts other base metal – precious metals occurrences including the Bull Road showing and Fragmental Zone.

The Pilley's Island Property consists of 7 adjoining licences covering a total are of 875 hectares. Access to and infrastructure at the property is excellent. The property is serviced with power mains and government maintained roads and is within 2 km of tide water. The property is located within a mining friendly district.
