

# Great Atlantic Reports Grab Samples of 20.0% Lead, 27.5% Zinc, 8.36% Copper and 63.4 gpt Silver from Pilley's Island, Newfoundland - Video Available

17.11.2017 | [Newsfile](#)

Vancouver, November 17, 2017 - Great Atlantic Resources (TSXV: GR) (FSE: PH01) together with its option partner Unity Resources, has released analytical results from rock samples collected during a recent trenching program, in preparation for a planned diamond drilling program at its Pilley's Island Property in late November.

InvestmentPitch.com has produced a "video" which discusses this news. If this link is not enabled, please visit [www.investmentpitch.com](http://www.investmentpitch.com) and enter "Great Atlantic" in the search box.

Pilley's Island Base Metal &#8212; Precious Metal Property, located in north-central Newfoundland, consists of 7 adjoining licenses covering a total area of 875 hectares, with excellent paved roads transecting the property.

Rock grab samples collected from the trenches returned up to 20.0% lead, 27.5% zinc, 8.36% copper and 63.4 grams per tonne silver.

## Rock Grab Samples from Selected Styles of Mineralization

| Sample # | Copper % | Lead % | Zinc % | Silver (gpt) | Antimony % |                                       |
|----------|----------|--------|--------|--------------|------------|---------------------------------------|
| 254513   | 8.36     | 0.01   | 0.14   | 15.5         | ---        | High copper massive sulphide clast    |
| 254514   | 5.78     | 20.00  | 27.50  | 63.4         | 0.30       | Zinc-lead rich massive sulphide clast |
| 254515   | 0.48     | 0.01   | 0.05   | 4.7          | ---        | Massive Py-Quartz clast               |
| 254516   | 0.51     | 0.55   | 1.15   | 6.5          | ---        | Matrix mineralization                 |
| 254517   | 2.02     | 6.50   | 16.40  | 41.7         | ---        | Massive sulphide clast                |

The recent trenching program included re-opening and re-evaluating the historic Bull Road Showing. The property is a volcanogenic massive sulphide deposit analogous to Kuroko/Buchans style mineralization.

The property hosts an historic copper mine with several zinc, lead, copper, gold and silver occurrences, and reported historic estimated reserves of 1,159,000 tonnes grading 1.23% copper, or 627,373 tons at 2.34% copper and 0.01 ounce per ton gold.

One area of recent trenching was the Bull Road Showing, where previous historic work included trenching and drilling with 7 holes sunk on the showing. Trenching along the trace of the Bull Road Showing exposed mineralization over a length of 130 metres with a width varying between 1 &#8212; 7 metres.

The Bull Road Showing is a polyolithic slump breccia of volcanogenic massive sulphide mineralization containing massive sulphide clasts up to and greater than a metre in length.

Reported historic trench samples at Bull Road showing included 12.42% zinc, 3.87% copper, 0.95% lead, and 0.71 ounces per ton silver over 4.6 metres. One historic drill hole at this showing reportedly intersected 22.2% zinc and 4.4% lead, 0.1% copper, and 0.96 ounces per ton silver over 0.65 metres of core, within an intersection of 7.85 metres grading 3.41% zinc, 0.51% lead, 0.66% copper, 0.34 ounces per ton silver.

#### Historic Trench Samples and Drill Intercepts

|                     | Zinc % | Lead % | Copper % | Silver (opt) % |             |
|---------------------|--------|--------|----------|----------------|-------------|
| Trench Sample       | 12.42  | 0.95   | 3.87     | 0.71           | 4.6 metres  |
| Historic Drill Hole | 3.41   | 0.51   | 0.66     | 0.34           | 7.85 metres |
| including           | 22.2   | 4.4    | 0.1      | 0.96           | 0.65 metres |

The shares are trading at \$0.115 and with 37.1 million shares outstanding, the company is capitalized at \$4.3 million.
