Tower Resources Completes First Nechako Gold Drill Program

21.11.2017 | The Newswire

Vancouver, November 21, 2017 - Tower Resources Ltd., (TSX.V: TWR) has completed Phase 2 of the 2017 exploration program on the 100% owned Nechako Gold Project in the Blackwater district of central BC.

In late October, Tower mobilized a Reverse Circulation (RC) rig to the property to sample till and test bedrock below gold rich till cover in priority target areas on the property. Multiple untested or poorly tested target areas have been identified on the property based on highly encouraging results from the ground geophysical Induced Polarization (IP) survey completed on the property in June 2017 and the significant 2016 gold-in-till sample results. In total, 38 RC drillholes were completed over core areas on the property; assays from top of bedrock samples and results from till sampling are pending and will be released once received and interpreted.

A prominent gold grain anomaly at least 3.5 kilometres long by 2 kilometres wide was defined on the property by systematic till sampling in late 2016 (see press release January 18, 2017). Additionally, the June 2017 IP program detected a 1000m by 500m coincident chargeability and resistivity anomaly underlying a previously untested and till covered area of the property adjacent to a major through-going structure. The RC program has been designed to both test bedrock within the newly identified geophysical anomaly and to further delineate the gold-grain-in-till anomaly.

Geological mapping, geochemical sampling and relogging of historic core accompanied the RC drill work. Targets in the center, center-east and center-west of the property tested by RC drilling were developed based on coincident geophysical anomalies in chargeability and resistivity, regional structure, alteration and gold values in historic drillcore, and vectoring towards a gold source based on distribution of gold-in-till values. Follow-up diamond drilling is planned in 2018 to test targets refined through 2017 work programs.

The Nechako Gold property comprises 10 mineral tenures totalling 2,975 hectares in the Nechako Plateau Region of central British Columbia. The road accessible property is located approximately 30 kilometres northeast of New Gold Inc.'s Blackwater development project. Blackwater contains a proven and probable total mineral reserve of 8.2 million ounces of gold with 60.8 million ounces of silver (source: New Gold Inc. website). The Nechako Gold property is deemed prospective for Blackwater-type epithermal gold and silver mineralization and porphyry-related copper and gold mineralization.
