Albert Mining Inc. Staked 282 Claims Using its Artificial Intelligence Platform in the Ashuanipi Area, Quebec

21.11.2017 | The Newswire

Ottawa, November 21, 2017 - Albert Mining Inc. (the "Company" or "Albert") (TSX-V: AIIM), an exploration mining company and a leader in the use of artificial intelligence and advanced knowledge-extraction techniques in the mining sector, is pleased to announce the acquisition of 100% of the 282 claim Ashuanipi gold property covering 141 square kilometers (km2) located 30 km east of Schefferville, Quebec.

Albert has used its proprietary Computer Aided Resource Detection System (CARDS) to stake the best gold targets in the Ashuanipi Sub-Province in Quebec. The work consisted of compiling, processing, and merging available geological, geochemical, geophysical, and topographical data as well as satellite imagery of the Supra-Regional modelling area of 330,900 sq./km. CARDS used 398 variables (magnetic data, lake-bottom sediments and topography) which correspond to
8,264,291 data points at 200 m cell size.

Historic results have previously identified drill hole intersections revealing values of up 2.23 g/t Au over 19.5 meters, 12 km west of the project, and outcrops reaching 171.5 g/t, 8.6 g/t, 4.94 g/t, 1.74 g/t, 1.4 g/t Au, mostly associated with iron formations hosted in the metasediments (International Corona & Sigeom). Approximately 350 rusty zones with various degrees of mineralization were identified in the region (source: International Corona). Many gold anomalies were also identified by analyzing the lake-bottom sediments (source: Sigeom).

Mr. Michel Fontaine, President & CEO of Albert Mining, commented: "I am proud of the progress made in the business model of Albert regarding Exploration. CARDS is a unique computer system that uses powerful algorithms to digitally analyze publicly available and privately owned geological information using an interactive process in constant evolution. Currently, many projects around the world are big in terms of dimension and contain a lot of data (Big Data). Since 2004, CARDS has allowed exploration companies to save significant time and money by identifying areas of focus. The CARDS technology enables companies to reduce the size of their exploration area (in some cases by 97%) and to utilize 100% of the data available. Albert is ready to find new deposits."

The scientific and technical content of this release was approved by Grigor Heba, P.Geo., a qualified person as defined by the National Instrument 43-101.

About Albert Mining Inc. - Where Artificial Intelligence Meets Geology

Albert is a junior mining exploration company with an extensive portfolio of gold, copper and diamond properties in Quebec. Albert also recently acquired all assets from DIAGNOS Inc.'s mining division, including the Computer Aided Resources Detection System ("CARDS"). Albert can count on a multidisciplinary team that includes professionals in geophysics, geology, Artificial Intelligence, and mathematics. The Company's objective is to develop a new royalty stream by significantly enhancing and participating in the exploration success rate of mining.

This news release contains certain "forward-looking statements" or "forward-looking information" (collectively referred to herein as "forward-looking statements") within the meaning of applicable securities legislation. Such forward-looking statements include, without limitation, forecasts, estimates, expectations and objectives for future operations that are subject to a number of assumptions, risks and uncertainties, many of which are beyond the control of the Company. Forward-looking statements are statements that are not historical facts and are generally, but not always, identified by the words "expects", "plans", "anticipates", "believes", "intends", "estimates", "projects", "potential" and similar expressions, or are events or conditions that "will", "would", "may", "could" or "should" occur or be achieved. This news release contains forward-looking statements, pertaining to, among other things, the following: the resumption of the trading of Albert shares on the TSX Venture Exchange. Statements regarding future production, capital expenditures and development plans are subject to all of the risks and uncertainties normally incident to the exploration for and development and production of oil and gas that may cause actual results or events to differ materially from those anticipated in such forward-looking statements. These risks include, but are not limited to, inflation or lack of availability of goods and services, environmental risks, drilling risks, regulatory changes and certain other known and unknown risks detailed from time to time in Albert's public disclosure documents, copies of which are available on Albert's SEDAR profile at www.sedar.com.

Although Albert believes that the material factors, expectations and assumptions expressed in such forward-looking statements are reasonable based on information available to it on the date such statements were made, no assurances can be given as to future results, levels of activity and achievements and such statements are not guarantees of future performance. Albert's actual results may differ materially from those expressed or implied in forward-looking statements and readers should not place undue importance or reliance on the forward-looking statements. Statements including forward-looking statements are made as of the date they are given and except as required by applicable securities laws, Albert disclaims any intention or obligation to publically update or revise any forward-looking statements, whether as a result of new information, future events or otherwise. The forward-looking statements contained in this news release are expressly qualified by this cautionary statement.

Neither the TSX Venture Exchange nor its Regulation Services Provider (as that term is defined in the policies of the TSX Venture Exchange) accepts responsibility for the adequacy or accuracy of this release.
