

Knick Exploration Inc: Trecesson Property-Cossette Gold System Extended

23.11.2017 | [The Newswire](#)

Val d'Or, November 23, 2017 - [Knick Exploration Inc.](#) ("Knick") is pleased to announce that recent field work on the Trecesson Property-Cossette gold system area has increased the known strike of the system by 180 meters southward. The total known strike length of the Cossette gold system is now 1,040 meters. Outcrops in the southern extension host quartz veining and quartz breccia (fragments of granitic host rock and mafic dyke in a white quartz matrix with minor hematite mineralization). The system is still open along strike. In the northern part of the Cossette gold system numerous quartz veinlets, stringers and veins were noted across 150 meters of its corridor. Follow up work is anticipated for after spring breakup.

The Trecesson property is located approximately 50 kilometers north and 10 kilometers northwest of the cities of Val D'Or and Amos, Quebec, Canada, respectively.

Previous drill result highlights

Results from Knick's 2011 first phase of drilling gold highlights included: 14.22g/t over 3.80m (0.415oz/ton over 12.46ft), 22.69g/t over 1.95m (0.663oz/ton over 6.4ft) and 22.86g/t over 1.55m (0.667oz/ton over 5.08ft). Results from the company's 2017 second phase drilling gold highlights included: 94.40g/t over 6.65m (2.756oz/ton over 21.82ft) including 828,18g/t over 0.75m (24.182oz/ton over 2.56ft). All core widths are down hole widths. These results were previously reported along with others in Knick's news releases of Aug. 16, 2011 and June 15, 2017 respectively.

2017 I.P. Survey

(IP) survey by Remy Belanger Geophysics proved the effectiveness of IP in tracing the Cossette gold system along strike and locating possible similar parallel mineralized structures.
