

# AIM Exploration Discusses Discovery of REE in Anthracite, Boon to Anthracite Mining in the US and Increased Demand for Anthracite

27.12.2017 | [ACCESS Newswire](#)

HENDERSON, Dec. 27, 2017 - [AIM Exploration](#) (the "Company"), an SEC reporting public company listed as OTC PINK: AEXE, announces the global need for anthracite in the world because of its Rare Earth Elements (REE).

A third-party news report on Nov. 17, 2017 announced the discovery by the U.S. Department of Energy's (DOE) National Energy Technology Laboratory (NETL) of precious Rare Earth Elements (REE) found in American coal basins and creatable in Anthracite, which is useful in computer, cell phone, and wireless products.

In the report, U.S. Energy Secretary Rick Perry said, "Rare Earth Elements are vital to the development and manufacturing of high-tech devices such as computers, cell phones, and our national defense systems. The current difficulties and high expenses associated with REE extraction have left the U.S. dependent on foreign REE imports."

The Rare Earth Elements are a group of 17 little-known elements, most of them with unpronounceable names like neodymium or ytterbium. However, these elements are very vital to the manufacturing of electronic components like smartphone displays, sensors, and electric motors. They are also vital for defense applications.
