

# Osisko Metals Signs Purchase Agreement to Acquire the Key Anacon Property in the Bathurst Mining Camp

27.12.2017 | [Marketwired](#)

MONTREAL, QUEBEC--(Marketwired - Dec 27, 2017) - [Osisko Metals Inc.](#) (the "Company" or "Osisko Metals") (TSX VENTURE:OM)(FRANKFURT:0B5) is pleased to announce that it has signed a Definitive Purchase Agreement to acquire an undivided interest in the Key Anacon claims and surrounding area ("Key Anacon") from Hunter Brook Holdings Limited ("Vendor").

Key Anacon is located within the Bathurst Mining Camp ("BMC") and is roughly 19 km due south of the town of Bathurst, New Brunswick and 16 km southeast of the former Brunswick #12 Mine. Key Anacon is comprised of 45 claim units with a total area of 981 hectares and hosts approximately 12 kilometres of the Brunswick Horizon, which extends onto adjacent and surrounding claims held by Osisko Metals.

## Project Highlights

Key Anacon contains two (2) significant Bathurst-type volcanogenic massive sulphide deposits. Both the Main and East deposits are hosted within the Brunswick Horizon stratigraphy that is similar to the former Brunswick No. 12 Mine host rocks. Key Anacon historical resources are not NI43-101 compliant, no known current mineral resource estimate has been conducted and no available pre-dates current regulations and quality control standards.

The New Brunswick Ministry of Energy, Mines and Petroleum Mineral Occurrence Database reports that the Main deposit contains historical resources that total 1.87 million tonnes grading 6.93% Zn, 2.63% Pb, 0.16% Cu, and 84g/t Ag in multiple, folded, and faulted units (Source: 2003, Economic Geology, Monograph 11). Key Anacon has been drilled from both surface and underground. No production is known, historical pre-production development includes a 460-metre shaft, a vent raise, eight development levels, and three sub-levels. Exploration potential is considerable below the deposit at 400 metres, and along strike.

The Key Anacon East Deposit is located 1.5 km along strike to the northeast from the Main Deposit and it has been intersected by several holes. The best intersection was reported in a press release dated August 16, 1993 by Rio Algom on drill hole D1 that intersected 19.9 metres grading 7.86% Zn, 3.58 % Pb, 0.33% Cu and 78 g/t Ag within a mineralized interval grading 1.35% Pb, 0.75% Cu and 40.94 g/t Ag over 82.3 metres.

Key Anacon was last explored in 2001. The potential on the property as well as on the adjacent Osisko Metals claims is expected to be excellent based on the presence of these significant deposits hosted within the considerable strike length of the folded Brunswick Horizon, with alteration and folding typically associated to BMC deposits.

Figure 1: Key Anacon claims as well as other deposits in the BMC list unclassified historical resources that are not NI43-101 compliant. The Company is not treating these historical estimates as current mineral resources and they are shown for information purposes only.

## THE KEY ANACON TRANSACTION

Pursuant to Purchase Agreement between the Vendor and Osisko Metals, the Company will acquire a 100% undivided interest in the Key Anacon Claims and will have the exclusive rights to explore and develop the Project in consideration of:

1. \$1 million (\$750,000 payable in cash and \$250,000 payable in the equivalent of Osisko Metals common shares valued at the 5-day VWAP preceding the day of the close of the transaction);

2. Additional \$500,000 (payable in the equivalent of Osisko Metals common shares valued at the 20-day VWAP, 24 following the signature of a definitive agreement);
3. Additional \$500,000 in cash on commencement of commercial production.

The Transaction is subject to the TSX Venture Exchange approval.

Jeff Hussey, President and CEO of Osisko Metals, commented: "We are very happy to announce the purchase of the h Key Anacon deposits as they will contribute significant resources and could become the cornerstone of Osisko Metals c concentrator multi-deposit concept in the Eastern portion of the BMC. Drilling is being planned and will consist of appro 12,000 metres to explore the area in an attempt to increase the global historical resources and upgrade them to NI43-1 standards."

#### Qualified Person

Robin Adair is a Professional Geologist registered in New Brunswick and Vice President Exploration for Osisko Metals, Qualified Person responsible for the technical data reported in this news release.

#### About Osisko Metals

Osisko Metals is a Canadian exploration and development company creating value in the base metal space with an em zinc. In 2017, the Company acquired over 50,000 hectares in the Bathurst Mining Camp ("BMC"). The objective is to de multi-deposit asset base that could feed a central concentrator. In parallel, Osisko Metals is monitoring several base me peers for projects and acquisition opportunities. In Québec, the Company acquired 42,000 hectares that cover 12 grass targets that will be selectively advanced through exploration. [Osisko Gold Royalties Ltd.](#) (TSX:OR)(NYSE:OR) and [Osisko Inc.](#) (TSX:OSK) are significant shareholders of the Company.
