

QMC Applies for a Drilling Permit for the Irgon Property

28.12.2017 | [GlobeNewswire](#)

VANCOUVER, British Columbia, Dec. 28, 2017 (GLOBE NEWSWIRE) -- [QMC Quantum Minerals Corp.](#), (TSX-V:QMC) (FRANKFURT:3LQ) (OTC PINK:QMCQF) ("QMC" or "the Company"). QMC is pleased to report that the company has submitted an application to the Government of Manitoba, through the office of Sustainable Development, in order to acquire a drilling permit which will allow the company to undertake a drill program on the Irgon Mine Property. This program is being designed to confirm results of previous historic drilling of the Irgon Dike with the ultimate goal being to bring the historic resource discussed below into compliance with current NI43-101 standards. In addition to confirming the historical drill results, the company plans to explore potential on-strike extensions of the dike and test the mineral potential of the dike below the currently reported historic 213 metre depth. The drill program will begin shortly once permits are in place.

Between 1953-1954, the [Lithium Corp.](#) of Canada Limited drilled 25 holes into the Irgon Dike and subsequently reported a historical resource estimate of 1.2 million tons grading 1.51% Li₂O over a strike length of 365 meters and to a depth of 213 meters (Northern Miner, Vol. 41, no.19, Aug. 4, 1955, p.3). This historical resource is documented in a 1956 Assessment Report by B. B. Bannatyne for the [Lithium Corp.](#) of Canada Ltd. (Manitoba Assessment Report No. 94932). This historical estimate is believed to be based on reasonable assumptions and neither the company nor the QP have any reason to contest the document's relevance and reliability. The ongoing detailed channel sampling and a subsequent drill program will be required to update this historical resource to current NI 43-101 standards. Historic metallurgical tests reported an 87% recovery from which a concentrate averaging 5.9% Li₂O was obtained. During this historical 1950 era work program, a complete mining plant was installed on site designed to process 500 tons of ore per day and in addition, a three-compartment shaft was sunk to a depth of 74 meters. On the 61 metre level, lateral development was extended off the shaft for a total of 366 meters of drifting from which six crosscuts transected the dike. The work was suspended in 1957, awaiting a more favourable market for lithium oxides and at this time the mine buildings were removed.

The mineral reserve cited above is presented as a historical estimate and uses historical terminology which does not conform to current NI43-101 standards. A qualified person has not done sufficient work to classify the historical estimate as current mineral resources or mineral reserves. Although the historical estimates are believed to be based on reasonable assumptions, they were calculated prior to the implementation of National Instrument 43-101. These historical estimates do not meet current standards as defined under sections 1.2 and 1.3 of NI 43-101; consequently, the issuer is not treating the historical estimate as current mineral resources or mineral reserves.

Qualified Person and NI 43-101 Disclosure

The technical content of this news release has been reviewed and approved by Bruce E. Goad, P. Geo. who is a qualified person as defined by National Instrument 43-101.

About the Company

QMC is a British Columbia based company engaged in the business of acquisition, exploration and development of resource properties. Its objective is to locate and develop economic precious, base metal and resource properties of merit. The Company's properties include the Irgon Lithium Mine project, two VMS properties, the Rocky Lake and Rocky-Namew known collectively as the Namew Lake District Project. Currently, all of the company's properties are located in Manitoba.

On behalf of the Board of Directors of

QMC QUANTUM MINERALS CORP.
