- EM geophysical surveying of the high-grade nickel-cobalt target to commence next week with drilling to follow.

EM geophysical surveying will be undertaken initially with drilling (for which statutory approvals have been received) to follow once all geophysical results have been received.

At Kurnalpi, historic drilling has intersected strong nickel-cobalt intercepts over an area 250 metres wide by 600 metres strike within weathered ultramafic rocks, including (ASX Announcement dated 12/12/17 and Figures 2 - 3 in link below);

- 10m @ 0.70% nickel, 0.11% cobalt from 30 metres in KURA38 including 3m @ 0.92% nickel, 0.21% cobalt from 34 metres,

- 8m @ 0.58% nickel, 0.20% cobalt from 24 metres in KURA400,

Maximum values from any one single sample are 2.04% nickel (2 metre composite sample in KURC22), 0.33% cobalt (4 metre composite sample in KURA400) and 0.28% copper (2 metre composite sample in KURC42).

The presence of elevated copper may be indicative of nickel sulphide mineralisation within the target area.

Mithril looks forward to providing further updates as the work progresses.
