SEMAFO: Positive Mana PFS and Reserve Additions at Mana and Boungou

16.02.2018 | GlobeNewswire

MONTREAL, Quebec, Feb. 15, 2018 (GLOBE NEWSWIRE) --

Figure 1 - Underground mining layout for the Siou mine

Table 2 -Timeline for Development of Siou Underground

<u>Semafo Inc.</u> (TSX:SMF) (OMX:SMF) today announced positive pre-feasibility study (PFS) results at Mana, the addition of 188,000 ounces of reserves, primarily at Siou underground, and an increase of 203,000 ounces of reserves at Boungou. As a result, the Corporation is providing the following consolidated five-year operational targets.

Table 1 - Five-Year Operational Targets

	2019	2020	2021	2022	2023	2019-2023 Average
Production ^{1,2,3}						
Mana ('000 oz)	192	213	213	213	214	209
Boungou ('000 oz)	226	226	201	186	180	204
	418	439	414	399	394	413
AISC1,2,4,5						
Mana (\$/oz)	906	1,079	887	823	660	871
Boungou (\$/oz)	419	405	527	606	626	516
	643	733	712	721	643	696
Operating Cash Flow (at \$1,300/oz) Total						
Revenue (\$M)	543	571	539	518	512	2,683
AISC (\$M)	268	321	295	287	253	1,424
	275	250	244	231	259	1,259

10.11.2025 Seite 1/9

¹ Mana results are based on the Mana PFS by Micon International Ltd., presented in Appendix 3.

² Boungou results are based on the updated mine plan presented in Appendix 4.

³ Assumption: Mineral reserves were estimated using a gold price of \$1,200/ oz.

⁴ All-in sustaining cost is a non-IFRS financial performance measure with no standard definition under IFRS and represents the total cash cost, plus sustainable capital expenditures and stripping costs per ounce.

⁵ The Mana AISC in the PFS has been updated for this analysis. The costs in the PFS are comparable to

current costs except for the US/Euro

exchange rate, which has fallen ~10%. Roughly 75% of the AISC is based on CFA, which is linked to the Euro. The AISC has therefore been increased by 10% for the 75% of the cost base.

Highlights of Mana Pre-feasibility Study

- Siou underground reserves stand at 3,035,000 tonnes at 5.29 g/t Au for 515,800 ounces
- Siou open-pit reserves stand at 1,579,000 tonnes at 3.57 g/t Au for 181,200 ounces
- Mana added 188,000 ounces of reserves before depletion, mainly from Siou underground
- Mana annual production will average over 200,000 ounces between 2019 and 2023 at an all-in sustaining cost of \$810 per ounce at a gold price of \$1,200
- Pre-production capital expenditure of \$51.7 million, to be financed with existing cash
- Underground operations eliminate the need to mine 62 million tonnes of open pit waste
- Mineral reserves at Mana stand at 18.2 million tonnes at a grade of 2.92 g/t Au for 1,710,300 ounces at year-end 2017 based on a gold price of \$1,200 per ounce

Mana Pre-feasibility Study

The Mana PFS provides a revised mine plan for all of Mana, including the Wona-Kona open pit, Siou open pit and Siou underground (see Appendix 3). An updated mineral reserves and resources statement for Mana is provided in Appendix 1.

The PFS investigated the potential for extracting the deeper zone of the Siou deposit using underground mining operations, mainly long-hole stoping. Access to the operations will be through a single portal and a 5.5- by 5.5-meter ramp at a 14-gradient slope. The location of the portal will allow mining in the northern part of the Siou pit to continue uninterrupted. The ultimate size of the underground mining operation will be more than 600 meters along strike by 200 meters deep. Figure 1 illustrates the underground mining layout for the Siou mine.

To view Figure 1 - Underground mining layout for the Siou mine click here: http://www.globenewswire.com/NewsRoom/AttachmentNg/2357d3e5-87a2-4dbc-9bd4-b105d3b03ac1

The PFS is based on a 2,000-tpd operation using contractor mining with discussions already ongoing with potential contractors. The underground mining costs are estimated at \$70 per tonne milled. The 18-month development period is expected to begin in the third quarter of 2018.

Table 2 provides an overview of the major milestones for development of Siou underground.

To view Table 2 -Timeline for Development of Siou Underground, click here: http://www.globenewswire.com/NewsRoom/AttachmentNg/a1214c37-5f2f-49c6-8912-25c625afa09e

The mineral reserves and resources were estimated as at December 31, 2017 in accordance with the definitions adopted by the Canadian Institute of Mining Metallurgy and Petroleum and incorporated into National Instrument 43-101 – Standards of Disclosure for Mineral Projects (NI 43-101).

The PFS for the Mana Mine was carried out by an in-house team whose work was reviewed by qualified persons from Micon International Ltd. Micon International Ltd. has reviewed this press release for accuracy and compliance with NI 43-101. Further details will be presented in a NI 43-101 compliant report to be filed on SEDAR within 45 days of the date of this press release.

Boungou Reserves & Resources Update

The 2017 infill drill program at Boungou added 203,000 ounces of reserves and 201,000 ounces of measured and indicated resources. The additional reserves have been pit-constrained at a \$1,200 gold price and are included in the updated reserves and resources statement in Appendix 2. As at December 31, 2017, mineral reserves at Boungou stood at 11.2 million tonnes at 4.11 g/t Au for 1.5 million ounces of gold. The additional reserves support an average production profile of over 200,000 ounces per year between 2019 and 2023 at an average AISC of \$516 per ounce. The updated Boungou mine plan is presented in Appendix 4.

An internal trade-off study was conducted on the West Flank in order to determine whether open pit or underground was the optimal mining approach. Open-pit mining provided better returns compared to an underground mining method. The remaining underground resources are included in the measured and indicated category, but are not included in the mine plan. Given the open-pit option, no pre-feasibility study is necessary.

The mineral reserves and resources were estimated as at December 31, 2017 in accordance with the definitions adopted by the Canadian Institute of Mining Metallurgy and Petroleum and incorporated into National Instrument 43-101 – Standards of Disclosure for Mineral Projects (NI 43-101). Mineral reserves and resources estimates for the Boungou Mine were carried out by an in-house team under the direction of Michel Crevier P.Geo MScA, Vice-President, Exploration and Mine Geology and SEMAFO's Qualified Person.

Conference Call

10.11.2025 Seite 3/9

The Corporation will hold a conference call on Friday, February 16 to discuss the pre-feasibility results for Siou underground and the multi-year plan. Interested parties are invited to join the call and webcast at 8 a.m. EST.

About SEMAFO

SEMAFO is a Canadian-based mining company with gold production and exploration activities in West Africa. The Corporation operates the Mana Mine in Burkina Faso, which includes the high-grade satellite deposit of Siou, and is targeting production start-up of the Boungou Mine in the third quarter of 2018. SEMAFO's strategic focus is to maximize shareholder value by effectively managing its existing assets as well as pursuing organic and strategic growth opportunities.

CAUTION CONCERNING FORWARD-LOOKING STATEMENTS

This press release contains forward-looking statements. Forward-looking statements involve known and unknown risks, uncertainties and assumptions and accordingly, actual results and future events could differ materially from those expressed or implied in such statements. You are hence cautioned not to place undue reliance on forward-looking statements. Forward-looking statements include words or expressions such as "targets", "assumptions", "will", "assumes", "estimated", "milestones", "expected" and other similar words or expressions. Factors that could cause future results or events to differ materially from current expectations expressed or implied by the forward-looking statements include the ability to meet our consolidated five-year operational targets, the ability to meet Mana annual production to average over 200,000 ounces between 2019 and 2023 at an all-in-sustaining cost of \$810 per ounce at a gold price of \$1,200, the ability to be in line with all assumptions contained in the PFS, the ability to meet all milestones for the development of Siou underground, the ability to execute on our strategic focus, fluctuation in the price of currencies, gold or operating costs, mining industry risks, uncertainty as to calculation of mineral reserves and resources, delays, political and social stability in Africa (including our ability to maintain or renew licenses and permits) and other risks described in SEMAFO's documents filed with Canadian securities regulatory authorities. You can find further information with respect to these and other risks in SEMAFO's 2016 Annual MD&A, as updated in SEMAFO's 2017 First Quarter MD&A, 2017 Second Quarter MD&A and 2017 Third Quarter MD&A, and other filings made with Canadian securities regulatory authorities and available at www.sedar.com. These documents are also available on our website at www.semafo.com. SEMAFO disclaims any obligation to update or revise these forward-looking statements, except as required by applicable law.

The information in this release is subject to the disclosure requirements of SEMAFO under the *Swedish Securities Market Act* and/or the Swedish *Financial Instruments Trading Act.* This information was publicly communicated on February 15, 2018 at 5:00 p.m., Eastern Standard Time.
