

Great Atlantic Has Completed the Final Option Payment on Its 100% Owned South Quarry Tungsten Property, Newfoundland

20.02.2018 | [FSCwire](#)

Vancouver, British Columbia (FSCwire) - [Great Atlantic Resources Corp.](#) (TSXV:GR) (the "Company" or "Great Atlantic") is pleased to announce it has made the final option payment for its South Quarry Tungsten Property, located in east-central Newfoundland. The property hosts tungsten mineralization in multiple areas, including veins. Multiple grab samples collected by Great Atlantic in 2015 exceeded 5% WO₃ (W% x 1.26 = WO₃%) (News Release November 19, 2015).

Tungsten Bearing Pegmatite Veins at South Quarry

Tungsten bearing pegmatite veins occur in the northern region of the property including at a quarry referred to as the S and an adjacent smaller quarry. Great Atlantic confirmed high grade tungsten mineralization (scheelite) in veins in rubble bedrock at these quarries during 2015 (News Release of November 19, 2015). Eleven rubble grab samples exceeded 5% WO₃ (W% x 1.26 equals WO₃%). A 20 cm long channel sample along a 15cm wide vein in the small quarry returned 2.96% WO₃. A grab sample from a 0.25 meter wide vein in the South Quarry returned 11.94% WO₃. A qualified person verified this sample. The qualified person supervised the 2015 sampling and verified the sample data. The samples (and lab-inserted blank, and standard samples) were analyzed at ALS Minerals in Sudbury, Ontario (ALS Minerals is independent of Great Atlantic Resources). Tungsten analysis was by lithium metaborate fusion followed by acid dissolution and ICP-MS analysis with samples re-analyzed by XRF.

Tungsten mineralization is reported in the southern region of the property, reported in narrow (<1m) calc-silicate horizons (Newfoundland and Labrador Dept. of Natural Resources Mineral Assessment Reports). A qualified person has not verified this mineralization.

Great Atlantic is planning work in 2018, to be focused in the area of the South Quarry and adjacent small quarry. Additional sampling of veins is planned to provide data on tungsten grade and distribution of tungsten bearing veins. The company is also planning diamond drilling and stripping permits for this area. Pending results of this work, the company is considering metallurgical studies including ore sorting technologies. The company is also planning diamond drilling further north of these quarries. In 2016 trenching exposed tungsten bearing veins. The Company has received a permit to drill five holes in this area.

The South Quarry Property covers an area of 3,600 hectares. Access to the property is excellent with a paved road traversing the property.

Christopher R. Anderson, President, stated "Mr. Martin and I were an integral part of the initial Management team that advanced the Sisson Tungsten-Molybdenum Project in New Brunswick, an advanced stage project currently operated by [Northcliff Resources Ltd.](#) We understand the tungsten market and feel that the South Quarry Tungsten Property, although in an early stage, has the earmarks of being a significant asset for the company. Currently Great Atlantic has two Joint Venture partners and we would be happy to welcome a third to assist in advancing the South Quarry Tungsten Project."

David Martin, P.Geol., a Qualified Person as defined by NI 43-101 and VP Exploration for Great Atlantic, is responsible for the

technical information contained in this News Release.

About Great Atlantic Resources Corp.: [Great Atlantic Resources Corp.](#) is a Canadian exploration company focused on discovery and development of mineral assets in the resource-rich and sovereign risk-free realm of Atlantic Canada, one of the number one mining regions of the world. Great Atlantic is currently surging forward building the company utilizing a Pro-Generation model, with a special focus on the most critical elements on the planet that are prominent in Atlantic Canada: Antimony, Tungsten and Gold.
