

# Teuton Resource Corp.: Airborne Geophysical Survey Planned over Pearson-Mach-Big Gold-Eskay Rift-Powder Properties

20.02.2018 | [GlobeNewswire](#)

VANCOUVER, British Columbia, Feb. 20, 2018 (GLOBE NEWSWIRE) -- [Teuton Resources Corp.](#) ("Teuton" or "the Company") (TSX-V:TUO) (Frankfurt:TUC) is pleased to report that it intends to carry out a ZTEM airborne survey over its Pearson-Mach-Big Gold-Eskay Rift-Powder properties.

The Pearson and surrounding properties lie about 20km to the south-southwest of Seabridge Gold's prolific KSM property, home to the world's largest reserves of copper and gold. The former Granduc copper mine, British Columbia's 2<sup>nd</sup> largest Besshi deposit after Windy Craggy, is situated 3km to the southwest. Garibaldi Resources' E&L nickel prospect, subject of intense exploration interest in 2017, lies 38km to the northwest along the path of the South Unuk/Harrymel Fault (which coincides with Kyba's "Red Line"). Both Garibaldi's E&L property and Teuton's Pearson property lie within gravity highs (see figure entitled Gravity Anomaly Map—URL at end of release).

Teuton presently owns a 100% interest in the Pearson and adjoining properties.

## Geophysical Anomaly

In early 2013 the previous owner of the Pearson property (Castle Resources) had an independent consulting company (Caracle Creek International Consulting) model and interpret a series of EM anomalies on the Pearson property as defined by an earlier VTEM airborne survey. The resulting work identified a major, 2+km long EM target. The target was scheduled for drilling by Castle in 2013 but due to unknown circumstances this was not done. In 2015, 100% ownership of the Pearson property reverted to Teuton.

[Readers are cautioned that Teuton's Qualified Person, D. Cremonese, P.Eng., has not independently verified either the collection of the geophysical data or the modelling/interpretation of it. However, he has no reason to believe that it is not reliable. As President of Teuton Resources, Mr. Cremonese is not independent of the Company.]

## New Area of Green/Blue Copper Stain

Prospecting carried out in 2017 to the north of the Pearson property on the Mach 3 claim resulted in the discovery of a kilometer long zone carrying numerous instances of green-blue, malachite and azurite stain. Local veins and breccia occurrences have carried gold values running from trace to 68.7 g/t gold. Pervasive pyrite mineralization along with copper staining and alteration suggest that this area may represent the top of a porphyry copper system.

## Exploration Plans for 2018

Teuton is soliciting bids for a ZTEM airborne geophysical survey to be flown over the Pearson-Mach region (as well as the neighbouring Tennyson claims). ZTEM is a useful tool for defining the alteration common around porphyry systems as well as identifying large and deep EM targets.

## About Teuton

Teuton owns interests in more than thirty properties in the prolific "Golden Triangle" area of

northwestern British Columbia and was one of the first companies to adopt what has since become known as the "prospect generator" model. Eleven of its properties are currently under option and cash proceeds from these options have exceeded \$1.45 million in the past two years, not including the value of shares received from the optioning companies. Shareholders and other interested parties can access information about Teuton at the Company's website, [www.teuton.com](http://www.teuton.com).

Respectfully:

"Dino Cremonese, P.Eng."

President, [Teuton Resources Corp.](http://www.teuton.com)
