

Glacier Lake Commences Drilling at Silver Vista

26.02.2018 | [GlobeNewswire](#)

VANCOUVER, British Columbia, Feb. 26, 2018 (GLOBE NEWSWIRE) -- [Glacier Lake Resources Inc.](#) (TSX-V:GLI) – (“Glacier” or the “Company”;) has commenced its 1500 to 2500 metre diamond drilling at the Silver Vista project, northeast of Smithers.

The initial drill program will concentrate on the main “MR” showing, a clastic sediment-hosted, fine grained, disseminated copper silver zone. Historic exploration includes soil geochemistry, trenching and diamond drilling in an area of limited outcrop exposure:

- 2009 and 2012 soil geochemistry outlined a silver-in-soil anomaly approximately 1.5 by 2.0 kilometers around the MR prospect area.
- Six 1991 excavator trenches highlighted an area 100 metres long by 17 metres wide, with three of the trenches intersecting mineralized bedrock: trench 2 – 10.5 metres at 0.22% Cu and 38 gpt Ag, trench 3 – 16.5 metres at 0.53% Cu and 74 gpt Ag and trench 4 – 15 metres at 0.53% Cu and 28 gpt Ag.
- Drilling in 1991 and 1992 consisted of fourteen drill holes totaling 1,252.5 metres and identified a semi-continuous zone 300 metres long by 50 metres wide by 3 to 150 metres deep with two of the holes ending in mineralization. Key intercepts include: MR91-01 – 32.87 metres at 0.19% Cu and 34.8 gpt Ag, MR91-03 – 61.91 metres at 0.11% Cu and 40.5 gpt Ag, MR91-04 – 25.9 metres at 0.08% Cu and 62.6 gpt Ag and MR92-02 – 36.58 metres at 0.49% Cu and 26.8 gpt Ag, including 2.84 metres of 3.65% Cu and 195.7 g/t Ag. MR92-02 represents the only deep hole to test this zone, and is a primary drill target for follow-up

[Glacier Lake Resources Inc.](#) cautions investors the Company has yet to verify the Equity exploration date. Data verification is one of the primary objectives of this drilling program. Further details and sources of information can be found in the Silver Vista 43-101 report on the property located under the Company’s SEDAR profile and on the Company’s website.

“It is both exciting and gratifying to reach the important drilling milestone for Glacier Lake. The drill campaign currently underway is expected to be the first of several phases of drilling at Silver Vista,” says Saf Dhillon, President & CEO. The Company is fully permitted for 10,000 metres of drilling at upwards for 40 sites.

QA/QC

Supervision, organization and splitting of drilling core samples are undertaken by personnel from geological consultant Mammoth Geological Ltd. The entire core length will be sawn with samples collected at continuous 1 metre intervals utilizing one half of the core. Samples will be catalogued by Mammoth geologists and stored in a secure location. Certified reference standards will be placed in the sample stream of each drill hole at random intervals. Blank material was also inserted at random intervals. Samples were packed into rice bags, zap strapped and securely stored until they were turned over to the local trucking company for transport to the ALS Minerals Laboratory in North Vancouver, B.C.

All core samples will be analyzed utilizing ALS’s MEICP-61 procedure, a 4 acid digestion of a 1 gram sample with an ICP finish. Samples with over-limit copper or silver values will receive a ME-OG62 analysis, a four acid digestion of a 0.5 grams sample with ICP-AES finish.
