

Great Atlantic Commences 2018 Exploration Program - Golden Promise Gold Property - Central Newfoundland

04.06.2018 | [FSCwire](#)

Vancouver, British Columbia (FSCwire) - [Great Atlantic Resources Corp.](#) (TSXV:GR) (the Company) is pleased to announce it has commenced the 2018 exploration program, beginning at its Golden Promise Gold Property, located in central Newfoundland. The Company is also planning exploration during 2018 at other properties, including its South Quarry Tungsten and Pilley's Island Precious Base Metal Properties in Newfoundland and its Keymet Precious Base Metal and Mascarene Cobalt Copper Nickel Gold Properties in New Brunswick.

The Company has commenced a program of prospecting and soil geochemical sampling at the Golden Promise Gold Property targeting multiple areas. Gold-bearing quartz veins are reported in multiple areas of the Property, including at least 4 gold-bearing quartz vein systems reported in one zone referred to as the Jaclyn Zone. The Company is currently exploring select areas for additional gold-bearing quartz veins. These include areas of gold-bearing float identified by the Company in 2017, soil geochemical anomalies identified by the Company in 2017, and favourable areas based on reported bedrock geology and reported historical airborne geophysical data. Quartz float samples collected by the Company during 2017 in one target area (referred to as the Branden Zone) in the northern region of the Property returned 57.2 and 200 grams / tonne (g/t) gold (News Release of August 28, 2017). The Company is exploring the southern region of the Property including areas peripheral to the Shawn's Shot quartz vein. A 0.32 meter long chip sample collected across the vein by the Company in 2017 returned 48.2 g/t gold (news Release of August 28, 2017). The Golden Promise Property is located southwest of the town of Badger and approximately 55 kilometres northeast of the Valentine Lake Property of [Marathon Gold Corp.](#)

Much of the reported historical exploration at the Golden Promise Property has been focused on the Jaclyn Zone in the northern half of the Property, with gold-bearing vein systems reported at Jaclyn Main, Jaclyn East, Jaclyn West, Jaclyn North and Jaclyn South Sub-zones. Most historic work was conducted at the Jaclyn Main Zone. Reported diamond drilling intercepts (meters) at the Jaclyn Main Zone include:

- GP02-01: 16.57 g/t Au over 2.55 m core length (1.64 m estimated true thickness)
- GP02-09: 7.05 g/t Au over 4.90 m core length (2.22 m estimated true thickness)
- GP06-52: 93.71 g/t Au over 1.40 m core length (1.25 m estimated true thickness)
- GP07-91: 141.21 g/t Au over 0.45 m core length (0.33 m estimated true thickness)
- GP07-92: 10.41 g/t Au over 4.70 m core length (1.60 m estimated true thickness)

Gold recovery from a reported 2,241 tonne bulk sample collected in 2010 at the Jaclyn Main Zone was reported to average 4.47 g/t Au. The average tails grade for the sample was reported to be 1.12 g/t Au. A back-calculated head grade of 5.59 g/t Au; was reported for the bulk sample.
