# Moneta Intercepts 47.00 m @ 2.08 g/t Gold Including 23.87 m @ 2.48 G/t Gold in a new Mineralized Shoot at South West

19.07.2018 | CNW

Symbol: TSX: ME

TORONTO, July 19, 2018 /CNW/ - Moneta Porcupine Mines Inc. (TSX:ME) (OTC:MPUCF) (XETRA:MOP) ("Moneta" o "Company") is pleased to announce the results from seven additional diamond drill holes completed on the South West ("South West") located within the Company's Golden Highway Project (located 110 km east of Timmins, Ontario, see F

# Highlights:

Step-out drilling at South West has identified a new mineralized shoot (SW-6) and the extensions of two (2) new veins Results continue to extend the strike and depth extent of the known vein structures and mineralized shoots.

## Mineralized Shoots

&bı	ıll; S	SW-6	Drill hole MGH18-091 intersected a new mineralized shoot (SW-6) assaying 47.00 metres ("m") @ 2.08
			grams per tonne gold ("g/t Au") including 1.86 m @ 5.66 g/t Au and 1.00 m @ 6.49 g/t Au

# Vein Structures

•		MGH18-090 intersected Willow vein extending the vein by 50 m to the north assaying 3.30 m @ including 1.00 m @ 7.06 g/t Au
•		Drill hole MGH18-088 intersected 4.70 m @ 2.16 g/t Au including 1.00 m @ 3.74 g/t Au extend by ~100 m to the south
•		Drill hole MGH18-093A intersected a new vein structure West Vein #1, assaying 10.00 m @ 2. including 3.15 m @ 3.24 g/t Au and 1.00 m @ 4.09 g/t Au 300m south of the West veins
•	West #2 Vein	A second vein structure West Vein #2 was intersected in drill hole MGH18-093A assaying 3.00 Au including 1.15 m @ 7.03 g/t Au extending the structures by 300 m to the south

Gary O'Connor, CEO & Chief Geologist commented, "We continue to be encouraged by the drill results which have contextend mineralization and intersected new mineralization. We have now identified seventeen (17) vein structures and and nine (9) mineralized shoots, ultimately adding to the overall size potential at South West. These results continue to our confidence and understanding of the vein structures and stockwork zones. We plan to complete the logging and as core from the expanded drill program on the Golden Highway project in order to define a larger gold system; increase the of veins and shoots; and confirm the higher grade mineralization in preparation for a resource update."

The latest assay results are from seven drill holes totalling 3,868.0 m of drilling at South West that continues to test the grade structural targets. The drill program at South West follows up on the previously announced exploration drill program undertaken by the Company in late 2017 and 2018 that was expanded to 41,100 m in 70 drill holes. Assays for the rem

23.12.2025 Seite 1/5

holes are pending and will be released as they become available for the South West and "55" areas.

#### South West Deposit

Drilling to date at South West has been successful in confirming the existence of seventeen (17) vein structures and nir mineralized shoots. The veins trend NW as stacked veins, steeply dipping to the SW at ~70°, and occur south of the Ba Formation ("BIF") within clastic Timiskaming age sediments. Two new veins intersected in the current drilling are thoug southern extensions of veins west of the Main Fault. The first six modelled veins have an average width of approximate and are spaced 25 m to 30 m apart. The vein structures can now be traced for over 400 m in strike length and have been historically drilled to depths of up to 1,200 m.

The sheared contact with the BIF hosts mineralized stockwork zones ("shoots") which plunge ~65° to ~75° to the west up to 50 m long, 25 m wide and have been confirmed to depths of over 1,000 m. A total of nine (9) shoots have now be identified.

The veins and stock-work style veining within the shoots occur as quartz-carbonate-pyrite veins within an ankerite alter occasionally associated with sericite. A zone of pyrite-chlorite and quartz veinlets occurs within the vein corridors and a gold mineralization. The veins can be brecciated and occur as quartz matrix supported breccia zones. The nine (9) min shoots and seventeen (17) vein corridors have now been successfully traced over a width of 1,200 m.

South West Drill Results

Drill hole MGH18-088 was drilled to test the southern extensions of the Redwood, Maple and Oak Veins. The drill hole the Redwood Vein (4.70 m @ 2.16 g/t Au, including 1.00 m @ 3.74 g/t Au at 510.00 m depth) extending this vein by ~1 south.

Drill hole MGH18-089 was drilled to test the location of stockwork vein zones located within mineralized shoots north at the BIF unit adjacent to the four SW-3 shoots. The hole drilled between the SW-3c and SW-3d shoots. The hole also tenorthern extensions of the Willow, Arbutus and Yew structures which it intersected (Yew: 0.30 m @ 3.51 g/t Au).

Drill hole MGH18-090 was also drilled to test the northern extensions of the SW-3 shoots, the up-dip extensions of the Arbutus veins and the northern contacts with the BIF. The drill hole extended the SW-3d shoot by 25 m to the north into 7.00 m @ 1.26 g/t Au and intersected the northern extensions of the Willow Vein assaying 3.30 m @ 3.67 g/t Au includ @ 7.06 g/t Au at 286.0 m depth extending the vein 50 m to the north and 100 m up-dip.

Drill hole MGH18-091 was drilled to test the northern and southern BIF contacts in the area between the SW-4 and SW mineralized shoots. The drill hole intersected a new zone of stockwork veining (SW-6) on the southern contact of the B the gabbro returning 47.00 m @ 2.08 g/t Au at 381.0 m depth including 23.87 m @ 2.48 g/t Au including 1.86 m @ 5.66 1.00 m @ 6.49 g/t Au.

Diamond drill hole MGH18-092 was drilled to test the southern extensions of the Willow and Arbutus veins up to 600 m BIF contact. The vein structures continue but narrow to the south.

Drill holes MGH18-093 and MGH18-093A were drilled to test the southern extensions of the vein structures located we Main Fault and the western and depth extensions of the SW-1 shoot. The drill holes confirmed the extensions of two veup to 300 m to the south intersecting 10.00 m @ 2.11 g/t Au including 3.15 m @ 3.24 g/t Au at 164.0m depth and 3.00 g/t Au including 1.15 m @ 7.03 g/t Au at 251.00 m depth. MGH18-093 intersected the western extensions of SW-1 inter m @ 2.33 g/t Au at 611.00 m extending the mineralized stockwork by 100 m to the west and 100 m to depth. Drill hole MGH18-093A was terminated short of the target.

# QA/QC Procedures

All core drilling conducted by Moneta is oriented. Drill core is sawn and half is sent ALS Canada Inc. for drying and crus mm, with a 1.00 kg split pulverized to -75 µm (200#). A 50 g charge is Fire Assayed and analyzed using a AAS finish for Samples above 10.00 g/t Au are analyzed by Fire Assay with a gravimetric finish and selected samples with visible gold high-grade mineralization are assayed by Metallic Screen Fire Assay on a 1.00 kg sample. Moneta inserts independent reference material and blanks with the samples and assays routine pulp repeats and coarse reject sample duplicates we samples, as well as completing third-party check assays at Activation Laboratories Ltd. Gary O'Connor, MAusIMM is a person under NI 43-101 and has reviewed and approved the contents of this press release.

## **About Moneta**

The Company holds a 100% interest in 5 core gold projects strategically located along the Destor-Porcupine Fault Zong Timmins Gold Camp with over 85 million ounces of past gold production. The projects consist of the Golden Highway, I Tisdale, Nighthawk Lake, Kayorum and Denton projects. The Golden Highway Project covers 12 kilometres of prospec

23.12.2025 Seite 4/5

ultramafic/mafic volcanic/sedimentary rocks along the DPFZ hosting a NI 43-101 indicated resource estimate of 1,091, (31.1 Mt at 1.09 g/t Au) and 3,204,000 ounces inferred (83.3 Mt at 1.20 g/t Au), clustered within four kilometres.

The Company's public documents may be accessed at www.sedar.com. For further information on the Company, pleas website at www.monetaporcupine.com or email us at info@monetaporcupine.com.

This news release includes certain forward-looking information and forward-looking statements, collectively "forward-looking statements" within the meaning of applicable Canadian securities legislation. Forward-looking statements are frequently by such words as "may", "will", "plan", "expect", "anticipate", "estimate", "intend" and similar words referring to future expectly. Forward-looking statements include, but are not limited to information with respect to the future performance of business, its operations and financial performance and condition such as the Company's drilling program and the timing thereof; and the ability of the Company to finance and carry out its anticipated goals and objectives.

Forward-looking statements are based on the current opinions and expectations of management. All forward-looking in inherently uncertain and subject to a variety of assumptions, risks and uncertainties, including the speculative nature of exploration and development, fluctuating commodity prices, competitive risks and the availability of financing, as descridetail in our recent securities filings available at www.sedar.com. Actual events or results may differ materially from the in the forward looking-statements and we caution against placing undue reliance thereon. We assume no obligation to update these forward-looking statements.
