

Condor Initiates Geophysics Program at Pucamayo East

08.08.2018 | [FSCwire](#)

Vancouver, British Columbia (FSCwire) - [Condor Resources Inc.](#) - (TSX.V: CN) Further to our news release of July 16th, we are pleased to announce that the additional ground geophysical surveys, consisting of IP and magnetics, has commenced at our Pucamayo East project.

The primary objective of the geophysics program is to extend to the south and to the east the principal drill target, and to define additional drill targets.
(<http://www.condorresources.com/i/maps/Pucamayo-East-Zone-Drill-Targets-Map.jpg>)

The program will consist of approximately 23 line kilometers of Induced Polarization and Magnetometry and will extend coverage to the south and east of previous geophysics work. Proposed orientation and location of the lines is shown on our website (<http://www.condorresources.com/i/maps/PUCAMAYO-IP-MAP.pdf>).

The area of the geophysics work coincides with the large high sulphidation epithermal residual silica, and clay assemblages, previously mapped at Pucamayo East as a large epithermal and porphyry system.

The Company is also pleased to announce that drilling at our Chavin project has commenced. Chavin is subject to a production lease agreement with Compañía Minera Casapalca S.A., which agreement, amongst other conditions, requires a minimum of 1,000m of diamond drilling. Drilling is designed to test to depth polymetallic veins exposed at surface; the main vein has been traced on surface for over a kilometre, with widths of 2 to 5m.

Condor is an aggressive explorer focused exclusively on Peru, supplemented by a project generator and royalty model generating exploration capital whilst minimizing shareholder dilution. Our objective is the discovery of a major new precious metals or base metals deposit in Peru. Project acquisition and development is managed by our Lima based exploration team.

ON BEHALF OF THE BOARD

Lyle Davis,

President & Chief Executive Officer
