

Hawkeye Discovers Copper Mineralization During Phase 1 Work Program at the McBride Property in BC's Golden Triangle

14.08.2018 | [FSCwire](#)

Vancouver, British Columbia (FSCwire) - [Hawkeye Gold & Diamond Inc.](#) (the "Company" or "HAWKEYE" (TSX.V-HAWK; Frankfurt Ticker: HGT; WKN: A12A61 ISIN: CA42016R3027): is pleased to announce the completion of Phase One work program at the McBride Property, strategically located in the Golden Triangle of northwestern BC.

The work was carried out by a crew from C.J. Greig and Associates (CJG) and the program included geological mapping and collection of 4 stream sediment, 301 soil and 40 rock samples.

Left: McBride property looking south toward the Red Chris mine. Center: Hand Trench (approximately 2m x 3m) showing disseminated chalcopyrite and malachite-bearing quartz-iron carbonate vein breccia. Right: Malachite-stained grab sample hosting disseminated chalcopyrite.

Several new copper-mineralized zones were discovered during the Phase One work, including malachite-stained, chlorite-altered iron carbonate-altered intrusive rocks hosting fine-grained disseminated chalcopyrite on the western part of the property, and malachite and chalcopyrite in quartz-carbonate veins within volcaniclastic rocks on the northern part.

The McBride Property is contiguous with the Red Chris Mine property of Imperial Metals to the south, and only 18 kilometers east of GT Gold's exciting "Saddle" discovery, where significant gold values were reported in recent campaigns. The McBride Property totals 2,635 hectares and is located approximately 12 kilometres east-northeast of Terrace, BC, Canada.

The principal geological units underlying the McBride property, like Hawkeye's Todagin and Boomerang properties, as well as those held by GT Gold and Imperial Metals, is underlain by Triassic and Jurassic stratified rocks of the Stuhini and Hazelton groups, which commonly host structurally-controlled precious and base metals mineralization that is associated with intrusive-related porphyry systems.

All soil, silt and rock samples have been delivered to ALS Global's preparation facility in Terrace, BC for precious metal and multi-element analysis. ALS Global in North Vancouver, British Columbia, Canada, is a facility certified as ISO 9001 and accredited to ISO / IEC 17025:2005 from the Standards Council of Canada.

Further news will be forthcoming.

Qualified Person

Technical information in this news release has been approved by Andrew Mitchell, B.Sc., P. Geo., a senior geologist with ALS and a qualified person for the purposes of National Instrument 43-101. *Mr. Mitchell has prepared, reviewed and validated the technical information contained within this release is accurate.*

About HAWKEYE

[Hawkeye Gold & Diamond Inc.](#) is a junior mineral exploration and development company based in Vancouver, British Columbia, Canada. The Company's precious and base metals properties are located in the prolific BC Golden Triangle, world-class Barkerville gold camp and Vancouver Island, BC, Canada. HAWKEYE's corporate mandate is to foster asset growth and to build shareholder value through the acquisition of low-cost, high-potential properties with discovery potential. Hawkeye

endeavours to manage its business in an environmentally responsible manner while contributing to local communities.
