## Lac Patu Vanadium Project

The Lac Patu Vanadium Project was staked directly north and along the trend of Uranor's uranium discovery at Lac Minowean. In 2008, Uranor, with the collaboration of Areva Quebec Inc. conducted an airborne geophysical survey over their Lac Minowean Project and outlined several distinct areas of high magnetism. Consequently in 2009, Uranor and Areva conducted a follow up Versatile Time Domain Electro Magnetic (VTEM) survey over the area locating several targets, and only those with high radioactivity were drilled. These 9 drill holes on the east side of Lac Minowean found uranium, copper, cobalt and vanadium. Geochemical values from drilling were reported as 8.03% vanadium (14.0% V<sub>2</sub>O<sub>5</sub>), 1.76% cobalt and 1.50% copper over 0.5 meters in the underlying dolomite.

Zimtu, along with its prospecting partners, continues to evaluate and acquire prospective resource properties for sale or joint venture. As part of the Company's business, Zimtu provides mineral property project generation and advisory services and helps to connect companies with mineral properties of interest.
