

# American Manganese Inc.'s President and CEO, Larry Reaugh Discusses Recent Company Updates with Everett Jolly on Uptick Newswire's "Stock Day" Podcast

23.08.2018 | [GlobeNewswire](#)

PHOENIX, Aug. 23, 2018 - [American Manganese Inc.](#) (TSX-V:AMY) (OTC:AMYZF) (FSE:2AM), (the "Company") announced President and CEO, Larry Reaugh's interview with Everett Jolly, Host of Uptick Newswire's "Stock Day" Podcast.

Jolly welcomed [American Manganese Inc.](#)'s President and CEO, Larry Reaugh back to the show for an update on the Company since last appearing in June 2018. Jolly said, "I tell you what. They are just a step and a way of getting ready to blow it up! Before we get started, you got a new Chief Technical Officer. Can you bring us up to speed on that? Why him?"

Reaugh responded that they chose Zarko Meseldzija because he's a mining engineer, plus he did a tremendous job on the business plan. He's a very welcome member to the management team of the Company.

Jolly wanted to know about some new pending technology and the CEO responded that they have had interest from all over the world, including invitations to various industry conferences. American Manganese has been very well received and have met with some of the biggest battery companies and commodity firms out there, together with companies not even directly involved in the battery industry.

Reaugh believes that once the patents have been granted, the interest may result in some sort of partnership.

Reaugh also stated that the Company is in the process of building a pilot plant, which he expects to be up and running this fall. Then the Company can move to the 3-ton-a-day commercial plant. "Believe it or not, that kicks off a lot of revenue."

Jolly wanted to know when the Company's revenues will balance out. Reaugh is hopeful they can start reporting revenues by early 2020.

"Larry, what should my listeners take from this interview and why should they go out and purchase your stock?"

"Okay, there's a lot of talk of recycling lithium-ion batteries. We're the most advanced out there. We have a patent pending that has been published already, so you can actually go onto our website and see the press release regarding that and look at the published patent. And we expect that the patent will be granted, like I said, in two or three months. And we're the leaders in that. . . We cover up to 100% of the cathode metals out of these batteries." He anticipates with industry growth that the battery business should be at least a 25-35 billion dollar business by 2025.

American Manganese is entering a field ahead of the pack that will put them in a position of being the largest recycler of lithium-ion batteries out there.

In closing, Reaugh said that the Company is beginning to change its focus and start attending more investor

shows. They're already going to many battery industry shows.

Hopefully, by the time he comes back to this radio show around the end of the year, he can provide listeners with more news on both the pilot plant and patent.
