

Cornerstone Metals Provides Update on its Drilling at Carlin Vanadium Project

19.09.2018 | [Newsfile](#)

Vancouver, September 19, 2018 - Cornerstone Metals Inc. (TSXV: CCC) (OTCQX: CCCCFF) (FSE: 1PY) ("Cornerstone" or the "Company") is pleased to provide an update on drilling on its Carlin Vanadium Project, located south of Carlin, Nevada.

The Phase 2 Reverse Circulation drilling program on the Carlin Vanadium Project is ongoing with a total of 33 drill holes completed to date. Two drill rigs are currently turning on the property and plans are to complete approximately 60 holes before the end of September. The objectives of this drill program are to infill and expand the deposit. Assay results are pending due to the general uptick in exploration activities resulting in an increased volume to laboratories. Initial results are expected to be out shortly.

The Carlin Vanadium deposit is considered one of the largest, highest grade primary vanadium deposits in North America (USGS Professional Paper 1802 Critical Mineral Resources of the United States—Economic and Environmental Geology and Prospects for Future Supply dated December 18, 2017).

Vanadium prices for 98% flake V2O5 have steadily risen from under US\$3.00/lb less than 3 years ago. This week prices reached US\$19.30/lb reflecting the higher demand for vanadium over its supply, globally.

Vanadium is growing in importance for key industrial manufacturing sectors most notably steel and renewable energy. Today, more than 85 percent of the world's vanadium is used in steel manufacturing applications. Its importance to the energy sector is also growing rapidly with more than 10 percent of vanadium production used in energy storage where its substantial cost and performance benefits make it an alternative choice to lithium ion in several areas.

About Cornerstone Metals Inc.

Cornerstone Metals has an option to earn a 100% interest in the Carlin Vanadium Project, located in Elko County 22 km by road (13 miles) from the town of Carlin, Nevada. The project is comprised of 72 contiguous unpatented mineral claims totaling 461 hectares (1,140 acres). The Carlin Vanadium Project hosts the Carlin Vanadium Deposit which is flat to shallow dipping and at shallow depths, 0-60 m (0-200 ft) below surface.

Forward-looking information

Certain statements in this news release constitute "forward-looking" statements. These statements relate to future events or the Company's future performance and include the Company's ability to meet the conditions required to exercise in full its option to acquire the Carlin Vanadium project and with respect to current and planned drill programs, the results of exploration programs, metallurgical test work, and changes in mineral resources. All such statements involve substantial known and unknown risks, uncertainties and other factors which may cause the actual results to vary from those expressed or implied by such forward-looking statements. Forward-looking statements involve significant risks and uncertainties, they should not be read as guarantees of future performance or results, and they will not necessarily be accurate indications of whether or not such results will be achieved. Actual results could differ materially from those anticipated due to a number of factors and risks. Although the forward-looking statements contained in this news release are based upon what management of the Company believes are reasonable assumptions on the date of this news release, the Company cannot assure investors that actual results will be consistent with these forward-looking statements. The forward-looking statements contained in this press release are made as of the date hereof and the Company disclaims any intention or obligation to update or revise any forward-looking statements whether as a result of new information, future events or otherwise, except as required under applicable securities regulations.
