

Currie Rose Resources Plans Next Phase of Exploration Work in Rossland, BC.

24.09.2018 | [Newsfile](#)

Toronto, September 24, 2018 - [Currie Rose Resources Inc.](#) (TSXV: CUI) (FSE: CDVM) ("Currie Rose" or the "Company") is pleased to provide shareholders with an update of activities on the Rossland Gold Project (the "Project") located in central southern British Columbia, including the selection of drill targets for its first drill program and preparation for an airborne drone magnetic survey of the property.

Work by the company to date includes:

- Completion of ground-based field work including rock chip sampling and historic mine dump sampling. Results are pending;
- Planning of an Airborne Drone magnetic survey to be completed by the end of October, 2018 to assist in identifying potential strike extensions to known high sulphide bearing veins that can host gold mineralisation;
- Absorption of the historically mined "Con. St. Elmo" Crown claim into the current package, at no cost to the company;
- Identification of preliminary diamond drill targets through the extensive review of historic records;
- Identification of additional drill targets through the continued review of the historic data, identifying potential strike extensions to known mineralisation from historic mining activities;
- Submission of a Notice of Work to the BC Ministry of Energy and Mines to approve anticipated drilling activities.

Michael Griffiths, Currie Rose President and CEO, commented: "The Rossland Project has progressed significantly since the project was acquired by Currie Rose earlier this year. Of particular interest, the historic database, in conjunction with recent field work has provided valuable input to our work plans. With the opening of our company office in Rossland, BC., we look forward to working with the Rossland community and providing shareholders more positive news flow over the coming weeks and months."

The Rossland Mining Camp produced more than 2.7 million ounces of gold, 3.5 million ounces of silver and 71 tonnes of copper between 1894 and 1941 and ranks as the third largest lode gold camp in British Columbia history.

About Currie Rose Resources Inc.

Currie Rose is a precious metal explorer focused on identifying high value assets in Canada. Our current projects span British Columbia and Ontario with our immediate focus on the recently acquired Rossland Project in BC.
