

Wallbridge intersects 37.91 g/t gold over 5.26 metres and 21.00 g/t gold over 4.56 metres

23.10.2018 | [CNW](#)

TORONTO, Oct. 23, 2018 - [Wallbridge Mining Company Ltd.](#) (TSX:WM, FWB: WC7) ("Wallbridge" or the "Company") is announce continued positive results from its underground drill program and to provide an update on the ongoing development of the 35,000-tonne bulk sample and underground exploration program at its 100%-owned Fenelon Gold Property.

Highlights

- Visible gold was observed to be present in 46 of 76 holes drilled to date.
- Since the last press release (see Wallbridge Press Release dated October 09, 2018), highlights of received assay results are as follows:

18-1000-002: 19.60 g/t gold over 2.09 metres in the Naga Viper zone

18-1000-003: 21.00 g/t gold over 4.56 metres in the Naga Viper zone and

37.91 g/t gold over 5.26 metres in the Habanero zone

18-0990-013: 13.92 g/t gold over 15.01 metres in a composite of two zones including

10.31 g/t gold over 4.89 metres in the Paprika zone and

24.30 g/t gold over 6.37 metres in the Habanero zone (previously released in Wallbridge Press Release dated October 09)

18-0990-014: 19.37 g/t gold over 1.68 metres in the Habanero zone

18-0990-015: 13.25 g/t gold over 1.50 metres in the Chipotle zone

- Assay results from 30 underground drill holes are pending.
- Production from the third stope (CH-02) is underway and the fourth stope (NV-02) is being prepared.

Underground drilling to date from the 5213 Level has mainly targeted the high-grade shoots down to 5130 Level (~120 m) which is the lowermost level that is planned to be developed during the 2018 bulk sample program.

In the next few weeks drilling will focus below the 5130 Level. A new underground drill station has been developed on the 5130 Level, which will be used to target the main high-grade shoots down-plunge to 200 m depth.

The bulk sample is expected to produce 19,000 to 26,000 ounces of gold with close to 50% of gold priced at C\$1,720 per ounce. The expected cash flow upon completion of this bulk sample, net of all bulk sample costs and including the financing costs, is expected to be sufficient to cover the budgeted working capital requirements.

The bulk sample program is designed to test a few stopes in several zones. Overall grade from these planned stopes is expected to average 18 to 25 g/t gold. The geology team has developed an extensive sampling program to characterize the mine.

material during this bulk sample. Chip samples are collected from a sampling line across each development face and m samples are also taken in a regular pattern on surface.

A 10,000-metre surface drilling program is now also underway to follow known mineralized zones and expand resource and further away from the mine workings.

A summary of the drill hole results from the underground drilling are reported in Tables 1 and 2 and also shown on the below as well as on the Company website.

**Intervals containing visible gold ("VG")

Wallbridge's Fenelon Gold Property is located in northwestern Quebec proximal to the Sunday Lake Deformation Zone which hosts the Detour Gold Mine in Ontario, and Balmoral Resources' gold deposits at Martiniere. The Fenelon Gold Property hosts the Discovery Zone gold deposit and surrounding 4 km strike length of a gold-hosting secondary splay of the Sunday Lake Deformation Zone.

Since acquiring the property in late 2016, Wallbridge has completed an updated resource estimate and a positive pre-feasibility study on the existing resource (see Wallbridge Press Release dated February 02, 2017). In addition, Wallbridge has completed surface exploration drilling campaigns and is currently drilling from underground as part of its 35,000-tonne bulk sample program. Drilling to date has significantly extended existing zones and discovered several new parallel zones.

Drill core samples from the ongoing drill program at Fenelon were cut and bagged on site and transported to SGS Canada Inc. laboratories. Samples, along with standards, blanks, and duplicates included for quality assurance and quality control, were prepared and analyzed at SGS Canada Inc. laboratories. Samples are crushed to 90% less than 2mm. A 1kg riffle split is pulverized to 75µm.

About Wallbridge Mining

Wallbridge is currently developing its 100%-owned high-grade Fenelon Gold property in Quebec with ongoing exploration and a bulk sample in 2018. Wallbridge is also pursuing other additional advanced-stage projects which would add to the Company's near-term project pipeline. These discussions benefit from the operating capabilities Wallbridge demonstrated by safely and efficiently mining the Broken Hammer deposit in Sudbury, which was completed in October 2015. Wallbridge is also conducting partner-funded exploration on its large portfolio of nickel, copper, and PGM projects in Sudbury, Ontario, with a focus on the high-grade Parkin project.

This press release may contain forward-looking statements (including "forward-looking information" within the meaning applicable Canadian securities legislation and "forward-looking statements" within the meaning of the US Private Securities Litigation Reform Act of 1995) relating to, among other things, the operations of Wallbridge and the environment in which it operates. Generally, forward-looking statements can be identified by the use of words such as "plans", "expects" or "does not expect", "is expected", "budget", "scheduled", "estimates", "forecasts", "intends", "anticipates" or "does not anticipate", or variations of such words and phrases or statements that certain actions, events or results "may", "could", "would", "might" or "will" be taken, "occur" or "be achieved". Wallbridge has relied on a number of assumptions and estimates in making such forward-looking statements, including, without limitation, the costs associated with the development and operation of its projects. Such assumptions and estimates are made in light of the trends and conditions that are considered to be relevant and are based on information available and the circumstances existing at this time. A number of risk factors may cause actual results of activity, performance or outcomes of such exploration and/or mine development to be materially different from those expected or implied by such forward-looking statements including, without limitation, whether such discoveries will result in commercially viable quantities of such mineralized materials, the possibility of changes to project parameters as plans continue to be refined, the ability to execute planned exploration and future drilling programs, the need for additional funding to continue exploration and development efforts, changes in general economic, market and business conditions, and those other risks set forth in Wallbridge's most recent annual information form under the heading "Risk Factors" and in its other public filings. Forward-looking statements are not guarantees of future performance and such information is inherently subject to known and unknown risks, uncertainties and other factors that are difficult to predict and may be beyond the control of Wallbridge. Although Wallbridge has attempted to identify important risks and factors that could cause actual actions, events or results to differ materially from those described in the forward-looking statements, there may be other factors and risks that cause actions, events or results not to be as anticipated, estimated or intended. Consequently, undue reliance should not be placed on such forward-looking statements. In addition, the forward-looking statements in this press release are given as of the date hereof.
