

Benchmark Reports 51g/t Gold Equivalent and Widespread Gold and Silver Anomalies Across an 8 Kilometre Trend

10.11.2018 | [GlobeNewswire](#)

EDMONTON, Nov. 09, 2018 - [Benchmark Metals Inc.](#) (the "Company" or "Benchmark") is pleased to announce new rock grab samples including 51.01g/t AuEq*. The new and historical surface samples are providing geological evidence for widespread gold and silver mineralization across the Lawyers Project area. Benchmark recently reported a combined interval of new and historic sampling over 36.5 metres at 3.5g/t AuEq (DDH 15-06, from 8.50m to 45m, October 27, 2018) at the Cliff Creek Zone, an area where mineralization extends for over 500 metres and remains open down-dip and on strike. The Lawyers Gold and Silver Project is located in the Golden Triangle region of British Columbia, Canada.

Sample Location Map. NOTE: DDH CC15-06 includes new and historical samples

CEO John Williamson commented, *"Significant widespread mineralization across the entire Lawyers Project area is providing compelling evidence of zones that extend for hundreds of metres at surface. The high-grade rock samples taken at the Marmot Zone provides a priority target area for a larger 2019 drill program. In addition, high-grade samples from the Phoenix Zone lie overtop of recently completed drilling that awaits assay results. Sampling at the AGB Zone suggests a large area of mineralization that was never fully mined."*

Surface Sampling Program

The 2018 field program included the collection of 312 rock grab samples from outcrop and subcrop locations and 1,041 soil samples. Results from this sampling have provided two new discoveries with anomalous gold and silver results at the Phoenix East Zone and the Marmot Zone. The geological trend stretches over 8 kilometres from the Marmot Zone in the southeast to the Kodah Zone in the northwest of the Property. The Location Map is available at [BenchmarkMetals.com](#).

Sampling Results - Selected sample results below from 2018 rock samples at the Phoenix, Marmot, AGB, Dukes Ridge and Silver Pond North zones.

2018 Rock Samples – New as of this news release

Marmot Zone	31.80g/t gold	1,590g/t silver	51.01g/t AuEq
AGB Zone	7.94g/t gold	1,265g/t silver	23.23g/t AuEq
Marmot Zone	4.97g/t gold	872g/t silver	15.51g/t AuEq
Marmot Zone	5.86g/t gold	716g/t silver	14.51g/t AuEq
Silver Pond North	12.05g/t gold	7.88g/t silver	12.15g/t AuEq
Marmot Zone	6.26g/t gold	472g/t silver	11.96g/t AuEq

2018 Rock Samples – Previously Reported

Phoenix Zone	220g/t gold	>10,000g/t silver	340.83g/t AuEq
Phoenix Zone	160g/t gold	1,440g/t silver	177.40g/t AuEq
Dukes Ridge Zone	23.10g/t gold	5,370g/t silver	87.99g/t AuEq
AGB Zone	22.20g/t gold	80.90g/t silver	23.18g/t AuEq
AGB Zone	17.70g/t gold	61.60g/t silver	18.44g/t AuEq
AGB Zone	16.15g/t gold	107g/t silver	17.44g/t AuEq

*Gold equivalent numbers are calculated using \$1,200 Au/oz and \$14.50 Ag/oz.

Lawyers Gold and Silver Project

The Lawyers Property and formerly producing Cheni Gold and Silver Mine is located 45 km northwest of the Kemess Gold and Copper Mine. The Property contains an existing Mineral Resource and hosts a minimum of 16 gold and silver occurrences that were never fully mined, developed or explored. The 99km² prospective land package presents a unique opportunity for Benchmark to carry out exploration on a “scale. There remains excellent potential for the discovery of additional low and high-sulphidation epithermal precious metal deposits like those that have been discovered and explored to date in the Golden Triangle region.

Quality Assurance and Control

Results from samples was analyzed at ALS Global Laboratories (Geochemistry Division) in Vancouver, Canada (an ISO 9001:2008 accredited facility). The sampling program was undertaken by Company personnel under the direction of Rob L’Heureux, P.Geol. A secure chain of custody is maintained in transporting and storing of all samples. Gold was assayed using a fire assay with atomic emission spectrometry and gravimetric finish when required (+10g/t Au). Analysis by four acid digestion with 48 element ICP-MS analysis was conducted on all samples with silver and base metal overlimits re-analyzed by atomic absorption or emission spectrometry. Rock chip samples from outcrop/bedrock are selective by nature and they may not be representative of the mineralization hosted on the project.

The technical content of this news release has been reviewed and approved by Michael Dufresne, M.Sc., P.Geol., P.Geo., a qualified person as defined by National Instrument 43-101.

About Benchmark Metals Inc.

Benchmark is a Canadian mineral exploration company with its common shares listed for trading on the TSX Venture Exchange in Canada, the OTCQB Venture Market in the United States and the Tradedgate Exchange in Europe. Benchmark is managed by proven resource sector professionals, who have a track record of advancing exploration projects from grassroots scenarios through to production.
