# Altiplano Confirms Continuity and Grade of Farellon Vein System at Depth: Plans Hugo Decline Extension

11.06.2019 | Newsfile

Edmonton, June 11, 2019 - Altiplano Metals Inc. (TSXV: APN) (OTCQB: ALTPF) (WKN: A2JNFG) ("Altiplano" or the "Company") is pleased to report excellent continuity and grade from preliminary drilling results beneath the 395 M level of the Farellon Vein system, near La Serena, Chile.

CEO John Williamson stated, "These results are very encouraging and provide us with a better understanding of the vein system at depth, guiding the continued development of the Hugo decline for access to this Cu-Au mineralization."

Table 1 - Preliminary 2019 Drill Results

| Drill Hole | Length (m) | Dip (°) | Azimuth | Vein from (m) | Vein to (m) | Interval (m) | Estimated True Width (m) | Cu Grade (%) |
|---|---|---|---|---|---|---|---|---|
| 19FNDH033 | 35.8 | -35 | 110 | 23.40 | 32.05 | 8.65 | 4.90 | 1.41 |
| 19FNDH036 | 31.2 | -43 | 205 | 15.00 | 29.40 | 14.40 | 2.50 | 3.55 |
| 19FNDH037 | 88 | -50 | 110 | 53.50 | 77.50 | 24.00 | 4.30 | 2.28 |

The first three diamond drill hole results from a 6-hole drill program that tested 250 metres of strike extent beneath the current 395 M level of the Farellon Vein system confirm excellent down-dip continuity and grade to the Cu-Au mineralization. These results in conjunction with pending results from three more diamond drill holes will be used to plan the advancement of the Hugo decline, allowing access to the lower levels of the vein system and known wider zones of mineralization.
