

Margaret Lake Diamonds and Cache Exploration Receive Shareholder Approval for Kiyuk Lake Gold Property Transaction

25.06.2019 | [ACCESS Newswire](#)

VANCOUVER, June 25, 2019 - [Margaret Lake Diamonds Inc.](#) (TSX.V: DIA / FSE: M85) ("Margaret Lake" or the "Company") is pleased to report that Cache Exploration Inc. ("Cache") (TSX.V: CAY) shareholders have approved the proposed acquisition (the "Transaction") in which the Company will acquire up to an 80% interest in the KiyukLake Gold Property ("Kiyuk Lake" or the "Property") located in southern Nunavut. The Companies will be filing a NI 43-101 technical report to support the technical disclosure of the Transaction shortly.

About the Kiyuk Lake Gold Property

The Kiyuk Lake land package consists of 70 contiguous mineral claims encompassing over 59,000 hectares and offers year-round accessibility to a 35-person base camp. Significant past exploration, beginning with Newmont Mining in 2008 and most recently Cache Exploration in 2017, has resulted in over 13,000 meters of core drilling and delineation of four mineralized zones and five additional high priority target areas that have yet to be drill tested. Mineralization has been traced across a 13-kilometer strike length and remain open in all directions. The main focus of exploration to date has been on the high-grade Rusty zone. In 2017, drilling within the Rusty zone returned broad intercepts of gold mineralization including:

- 8m of 26.48 g/t gold from 108m, including 2m of 92.76 g/t gold from 110m, in DDH KI17-001
- 38m of 1.16 g/t gold from 58m, including 8m of 3.98 g/t gold from 68m, in DDH KI17-002
- 122m of 1.82 g/t gold from 188m, including 15m of 3.34 g/t gold from 294m, in DDH KI17-004
- 249m of 1.6 g/t gold from 8.2m in DDH KI13-004 (no cut-off)

** Drill intercepts are not true width. True widths are not known at this time. See Cache Exploration Inc. press releases dated October 12, 2017 and October 26, 2017 and Prosperity Goldfields press release dated April 9, 2013. While the Company believes the historical work was performed according to best practices and the exploration data is reliable, a Qualified Person has not verified the results independently.*
