

SolGold PLC Announces Constitutional Court Update

27.06.2019 | [ACCESS Newswire](#)

Constitutional Court Update

BISHOPSGATE, June 27, 2019 - Further to the announcement on 21 June 2019, SolGold advises that the full judgement has now been received reviewed and interpreted from the Constitutional Court in Ecuador following the petition that was heard on 5 June 2019.

The Court unanimously and definitively rejected the petition by the applicant to consider whether the future of mining in the Carchi and Imbabura Provinces in Northern Ecuador (in which SolGold's 85% owned Cascabel project and other wholly owned exploration projects are located), is valid and legal in accordance with the Ecuadorean Constitution, on technical grounds in that;

- 1it did not comply with Ecuador's values,
- 2it was too broad and
- 3did not have a purpose that was in compliance with the constitution.

In making a decision on such a question the Constitutional Court of Ecuador follows a two-step process. Firstly, assessing the procedural merits of the petition and secondly, and only if the first test is passed , a test on its form and substance. This petition was subject to the first formal test as noted above, whereby the Court considered the motivation and rationale of the petition, its relevance and connection with the purpose of the consultation and, the structure of the question itself. This is to ensure that it is clearly and objectively formulated, doesn't imply double questions, is not misleading to the potential voter, doesn't by-pass other constitutional procedures given the matter at hand and the intended effects of the intended consultation (referendum) in the event it could be allowed to proceed.

The Court found that this petition did not pass any of the formal criteria and was therefore rejected. As a result it did not proceed to be assessed by the second set of criteria.

Based on this process SolGold understands that this decision by the Court has set a precedent of significantly higher standards and legal robustness if future popular consultation (referendum) requests are to pass *firstly* the tests of procedure and form in order to be *secondly* considered by the Court on substance or merit.

In this decision, the Court also highlighted that it is unconstitutional to ask the inhabitants of certain provinces about the matters relevant to other provinces, and that mining is a matter of national interest (that cannot be opined upon by the inhabitants of a particular province) . A popular consultation in a region or province that is not a national referendum may not consist of a question that would imply legal reform by amending or new legislation. The future of mining in Ecuador is therefore to be determined by the Ecuadorean Federal government.

In this regard SolGold is heartened by the strong presentations by the Government showing the importance of a properly regulated mining industry to the development of the national economy and social and physical infrastructure of Ecuador. SolGold is also heartened by the strong local submissions in favour of mining generally and the social and economic importance to the local and regional communities.

CAUTIONARY NOTICE

News releases, presentations and public commentary made by SolGold plc (the "Company") and its Officers may contain certain statements and expressions of belief, expectation or opinion which are forward looking statements, and which relate, inter alia, to interpretations of exploration results to date and the Company's proposed strategy, plans and objectives or to the expectations or intentions of the Company's Directors. Such forward-looking and interpretative statements involve known and unknown risks, uncertainties and

other important factors beyond the control of the Company that could cause the actual performance or achievements of the Company to be materially different from such interpretations and forward-looking statements.

Accordingly, the reader should not rely on any interpretations or forward-looking statements; and save as required by the exchange rules of the TSX and LSE or by applicable laws, the Company does not accept any obligation to disseminate any updates or revisions to such interpretations or forward-looking statements. The Company may reinterpret results to date as the status of its assets and projects changes with time expenditure, metals prices and other affecting circumstances.

This release may contain "forward â,¬‘looking information" within the meaning of applicable Canadian securities legislation. Forward â,¬‘looking information includes, but is not limited to, statements regarding the Company's plans for developing its properties. Generally, forward â,¬‘looking information can be identified by the use of forward-looking terminology such as "plans", "expects" or "does not expect", "is expected", "budget", "scheduled", "estimates", "forecasts", "intends", "anticipates" or "does not anticipate", or "believes", or variations of such words and phrases or state that certain actions, events or results "may", "could", "would", "might" or "will be taken", "occur" or "be achieved".

Forward â,¬‘looking information is subject to known and unknown risks, uncertainties and other factors that may cause the actual results, level of activity, performance or achievements of the Company to be materially different from those expressed or implied by such forward â,¬‘looking information, including but not limited to: transaction risks; general business, economic, competitive, political and social uncertainties; future prices of mineral prices; accidents, labour disputes and shortages and other risks of the mining industry. Although the Company has attempted to identify important factors that could cause actual results to differ materially from those contained in forward-looking information, there may be other factors that cause results not to be as anticipated, estimated or intended. There can be no assurance that such information will prove to be accurate, as actual results and future events could differ materially from those anticipated in such statements. Accordingly, readers should not place undue reliance on forward â,¬‘looking information. The Company does not undertake to update any forward-looking information, except in accordance with applicable securities laws.

The Company and its officers do not endorse, or reject or otherwise comment on the conclusions, interpretations or views expressed in press articles or third-party analysis, and where possible aims to circulate all available material on its website.

The Company recognises that the term "World Class" is subjective and for the purpose of the Company's projects the Company considers the drilling results at the growing Alpala Porphyry Copper Gold Deposit at its Cascabel Project to represent intersections of a "World Class" deposit. The Company considers that "World Class" deposits are rare, very large, long life, low cost, and are responsible for approximately half of total global metals production.

"World Class" deposits are generally accepted as deposits of a size and quality that create multiple expansion opportunities, and have or are likely to demonstrate robust economics that ensure development irrespective of position within the global commodity cycles, or whether or not the deposit has been fully drilled out, or a feasibility study completed.

Standards drawn from industry experts (1) Singer and Menzie, 2010; (2) Schodde, 2006; (3) Schodde and Hronsky, 2006; (4) Singer, 1995; (5) Laznicka, 2010) have characterised "World Class" deposits at prevailing commodity prices. The relevant criteria for "World Class" deposits, adjusted to current long run commodity prices, are considered to be those holding or likely to hold more than 5 million tonnes of copper and/or more than 6 million ounces of gold with a modelled net present value of greater than USD 1 Billion.

The Company and its external consultants prepared an initial mineral resource estimate at the Cascabel Project in December 2017. Results are summarised in Table B attached.

The Mineral Resource Estimate was completed from 53,616m of drilling, approximately 84% of 63,500m metres drilled as of mid-December 2017, the cut-off date for the maiden resource calculation. There remains strong potential for further growth from more recent drilling results, and continue rapid growth of the deposit.

Any development or mining potential for the project remains speculative.

Drill hole intercepts have been updated to reflect current commodity prices, using a data aggregation method, defined by copper equivalent cut-off grades and reported with up to 10m internal dilution, excluding bridging to a single sample. Copper equivalent grades are calculated using a gold conversion factor of 0.63, determined using an updated copper price of USD3.00/pound and an updated gold price of USD1300/ounce. True widths of down hole intersections are estimated to be approximately 25-70%.

On the basis of the drilling results to date and the results of the Alpala Maiden Mineral Resource Estimate, the reference to the Cascabel Project as "World Class" (or "Tier 1") is considered to be appropriate. Examples of global copper and gold discoveries since 2006 that are generally considered to be "World Class" are summarised in Table A.

Table A: Tier 1 global copper and gold discoveries since 2006. This table does not purport to be exhaustive exclusive or definitive.

Grade	Resource	Tonnage	Grade		Contained Metal		
Category	Category	(Mt)	Cu (%)	Au (g/t)	CuEq (%)	Cu (Mt)	Au (Moz)
Total >0.2% CuEq	Indicated	2,050	0.41	0.29	0.60	8.4	19.4
	Inferred	900	0.27	0.13	0.35	2.5	3.8

Table B: Alpala Mineral Resource Estimate updated effective 16 November 2018.

Notes:

- Mr. Martin Pittuck, MSc, CEng, MIMMM, is responsible for this Mineral Resource estimate and is an "independent qualified person" as such term is defined in NI 43-101.
- The Mineral Resource is reported using a cut-off grade of 0.3% copper equivalent calculated using [copper grade (%)] + [gold grade (g/t) x 0.6] based on a copper price of US\$2.8/lb and gold price of US\$1,160/oz.
- The Mineral Resource is considered to have reasonable potential for eventual economic extraction by underground mass mining such as block caving.
- [Mineral Resources Ltd.](#) are not Mineral Reserves and do not have demonstrated economic viability.
- The statement uses the terminology, definitions and guidelines given in the CIM Standards on [Mineral Resources Ltd.](#) and Mineral Reserves (May 2014).

- The MRE is reported on 100 percent basis.
- Values given in the table have been rounded, apparent calculation errors resulting from this are not considered to be material.
- The effective date for the Mineral Resource statement is 16 November 2018.
