

Rio Tinto Commences Drilling on Forum's Janice Lake Copper Project, Saskatchewan

29.07.2019 | [Newsfile](#)

Vancouver, July 29, 2019 - [Forum Energy Metals Corp.](#) (TSXV: FMC) ("Forum") is pleased to announce that its partner Rio Tinto Exploration Canada Inc. (RTEC) has commenced a 7,000 metre diamond drill program on the Janice Lake copper project. The program is helicopter supported and will utilize two drill rigs to complete approximately 20 to 30 holes. Initially, drilling will concentrate on the areas of known copper mineralization while the data from the recently completed airborne magnetic survey is interpreted by RTEC's geophysical team. RTEC is planning to spend approximately \$3 million dollars on the project this year as part of a seven year, \$30 million option to earn 80% of the project.

The project team has prioritized four drill target areas (See Figure 1 below):

- Jansem - one of four holes drilled by Forum's initial program completed in 2018 intersected 18.5m (true thickness 18 m) grading 0.94% Cu and 6.7 g/t Ag including 5.2m grading 2.22% Cu and 16.5 g/t Ag.
- Janice - Noranda drill hole PL-93-11 intersected 33m grading 0.77% Cu.
- Kaz - Noranda drill hole PL-93-05 intersected 15.1m grading 0.32% Cu.
- Genie North (Juno) - An interpreted structural target with nearby grab samples at surface returning up to 1.9% Cu and 32 g/t Ag.

The goals for the program are to determine:

- the dip and attitude of the copper mineralization,
- the possibility of multiple strata-bound copper bearing mineralized horizons,
- the association of magnetics and copper in these rocks; and
- the possibility of high-grade zones of mineralization caused by structure (folds, faults) or by mafic-rich layers.

The detailed information gathered from this program, in addition to the data obtained by the recently completed airborne geophysical survey, will enable the team to identify future drill targets within the 52 km long sedimentary basin.

Figure 1: Planned Diamond Drill Areas for the 2019 Program. The red boxes show the areas to be drilled. Kaz, Janice and Jansem are along strike, while Genie is interpreted to be a repeated sequence of mineralized strata caused by faulting.
