

Wallbridge Drills Significant, Wide Intersections of the Tabasco Zone at Depth and Continues to Successfully Delineate Gold Zones in Area 51

09.10.2019 | [CNW](#)

TORONTO, Oct. 9, 2019 - [Wallbridge Mining Company Ltd.](#) (TSX:WM, FWB: WC7) ("Wallbridge" or the "Company") is providing significant new high-grade assays and visual results from the ongoing 70-80,000-metre 2019 drill program, which continues to follow up the Area 51 and Tabasco discoveries and outline a large gold system at its 100%-owned Fenelon Property ("Fenelon" or the "Property").

The new drilling further demonstrates the significance of the Tabasco zone below a vertical depth of 400 metres, where it is wider, better endowed and is entirely open along strike and to depth. Good continuities are being shown for several zones, including the newly named Andromeda and Orion corridors of Area 51 within the Jeremie Pluton and Area 51-style gold-bearing mineralization has also been intersected 800 metres further along strike to the northwest.

"We are very excited about the two recent intersections of the Tabasco zone in holes FA-19-086 and FA-19-090 where the results consistent with previously-reported assays confirm our modeling and understanding of this zone and reinforcing its importance as one of Fenelon's best-endowed gold zones," stated Marz Kord, President & CEO of Wallbridge Mining. "The data has also outlined at least three continuous zones in the Andromeda corridor of Area 51, which are also becoming increasingly enriched and wider with depth. We have accelerated the sampling and assaying of some of these significant intervals and will be reporting these assay results as soon as available."

Highlights (since last Wallbridge Press Release dated September 09, 2019):

Tabasco Zone

FA-19-086: A significant, approximately 48-metre core length intersection of the Tabasco zone with abundant sulfide mineralization and visible gold (see Fig. 3 and 7 as well as Photos 1-4). Assay results are pending.

FA-19-090: A significant, approximately 20-metre core length intersection of the Tabasco zone with sulfide mineralization and visible gold (see Fig. 3 and 8). Assay results are pending.

Area 51 – Andromeda Corridor

FA-19-062: 3.08 g/t gold over 5.81 metres, including 16.20 g/t gold over 0.80 metres. This intersection is the up-dip extension of a zone within the Andromeda corridor which thickens further below once it enters the Jeremie Pluton (3.28 g/t gold over 17.60 metres in FA-19-059, see Fig. 8).

FA-19-070: 2.67 g/t gold over 7.61 metres, including 6.00 g/t gold over 2.55 metres (which further includes 25.49 g/t gold over 0.45 metres). This intersection is the up-dip extension of a zone within the Andromeda corridor which thickens further below once it enters the Jeremie Pluton (2.43 g/t gold over 42.80 metres, including 5.00 g/t gold over 12.71 metres in FA-19-065, see Fig. 6).

FA-19-073: A network of near surface gold-bearing veins within the Jeremie Pluton grading 1.04 g/t gold over 35.39 metres, which includes the following higher-grade sub-intervals: 3.26 g/t gold over 5.95 metres (including 41.19 g/t gold over 0.46 metres) and 17.75 g/t gold over 0.40 metres. Other highlights include 4.10 g/t gold over 1.40 metres and 10.43 g/t gold over 0.37 metres (see Fig. 4).

FA-19-086: Several mineralized zones, two containing visible gold, over an approximately 200 metre core length in the Area 51, Andromeda corridor.

FA-19-090: Several mineralized zones over an approximately 230 metre core length in the Area 51, Andromeda corridor.

19-0915-011: Several mineralized zones, one containing visible gold, over an approximately 350 metre core length in the Area 51, Andromeda corridor (see Fig. 7 and 8). Assay results are pending.

19-0915-016: Several mineralized zones, six containing visible gold, over an approximately 280 metre core length in the Area 51, Andromeda corridor (see Fig. 7 and 8). Assay results are pending.

Area 51 – Contact Zone

FA-19-072: 15.98 g/t gold over 2.31 metres along the contact of the Jeremie pluton (see Fig. 5).

Area 51 – Orion Corridor

FA-19-060: A network of gold-bearing veins within the Jeremie Pluton in a newly discovered mineralized corridor over 97 metres core length with highlight intersections of 9.27 g/t gold over 1.58 metres and 2.20 g/t gold over 5.40 metres (including 17.76 g/t gold over 0.50 metres) (see Fig. 1).

19-0970-006: Several mineralized zones, two containing visible gold, over an approximately 70 metre core length in the Area 51, Orion corridor (see Fig. 9). Assay results are pending.

Cayenne Zone

FA-19-072: 12.77 g/t gold over 1.31 metres (see Fig. 5).

Main Gabbro Zones

FA-19-072: 3.58 g/t gold over 4.94 metres (including 21.09 g/t gold over 0.65 metres)

14.53 g/t gold over 1.50 metres (including 33.66 g/t gold over 0.62 metres) (see Fig. 5).

Jeremie Pluton– Grassroots Target

FA-19-089: One Area 51-style shear zone with visible gold and other related, possibly gold-bearing veins 800 metres further northwest within the Jeremie Pluton in a grassroots geological-geophysical target. Assay results are pending.

"The Tabasco zone is showing remarkable continuity and gold endowment at depth and we are now drilling its down-dip extension with two drill rigs. Along the way, our holes also intersected strong gold mineralization in the Andromeda corridor of Area 51. We have now moved one of our underground rigs to in-fill this mineralized area and better define several distinct, continuous targets. Our other underground rig is now drilling the newly discovered Orion corridor of Area 51 and two surface rigs are testing targets along strike of the known gold system", stated Attila Péntek, Vice President Exploration of Wallbridge. "Holes -066, -069 and -070, tested the up-dip extension of known zones in the sedimentary package near surface and will help define the Area 51, Tabasco and Cayenne zones, which significantly widen at depth once they enter more favorable host rocks".

Of the six drill rigs currently active on the Property, four are focusing on exploration drilling from surface, doing large-spaced step-outs to define the footprint of the Fenelon gold system and two underground drill rigs are doing more closely spaced drilling of the Tabasco zones and Area 51 near the existing mine workings. A total of over 50,000 metres have been drilled to date in 2019 and the drill program is on track to complete 70-80,000 metres by the end of the year.

Assay results are reported in Table 1 and the Figures for 9 surface drill holes (total of over 6,000 metres) of the 2019 exploration drill program. Assays are pending for 25 surface drill holes and 58 underground holes, for a total of approximately 30,000 metres. The Company's efforts to accelerate the sampling and assaying process has now resulted in faster turn-around time of results and we are expecting to release results more regularly.

All figures and a table with drill hole information of recently completed holes can be found on the Company website.

The Fenelon Gold Property is located proximal to the Sunday Lake Deformation Zone, an emerging gold belt in northwestern Quebec. This major east-west structure in the northern Abitibi greenstone belt hosts the Detour Lake mine, and is very similar to other breaks controlling world-class gold camps in the southern Abitibi, yet it remains underexplored due to thick overburden.

At Fenelon, secondary splays of the Sunday Lake Deformation Zone have controlled the emplacement of a significant gold belt along the Jeremie Pluton. Historically, exploration has focused on high-grade shear zones hosted in the Main Gabbro, where Wallbridge has completed a bulk sample of 33,000 tonnes grading 18.49 g/t gold.

In late 2018, exploration drilling discovered a new geologic setting with extensive, vein network gold mineralization within the Fenelon pluton, naming it Area 51. The ongoing 70,000-80,000 m drill program is proving the connectivity of Area 51 through the sediment-hosted Tabasco and Cayenne zones to the Main Gabbro and is continuing to expand the footprint and depth of the Fenelon gold system.

Drill core samples from the ongoing drill program at Fenelon were cut and bagged on site and transported to SGS Canada. Samples, along with standards, blanks, and duplicates included for quality assurance and quality control, were prepared and analyzed.

analyzed at SGS Canada Inc. laboratories. Samples are crushed to 90% less than 2mm. A 1kg riffle split is pulverized to < 75 microns, with 50g samples passing 106 microns. 50g samples are analyzed by fire assay and AAS. Samples >10g/t Au are automatically analyzed by fire assay with gravimetric finish or screen metallic analysis. To test for coarse free gold and for additional quality assurance and control, Wallbridge requests screen metallic analysis for samples containing visible gold. These and future assay results will be available from time to time due to re-analysis for quality assurance and quality control.

The Qualified Persons responsible for the technical content of this press release are Marz Kord, P. Eng., M. Sc., MBA, CEO and Attila Péntek, P.Geo., Ph.D., Vice President Exploration of Wallbridge.

About Wallbridge Mining

Wallbridge is establishing a pipeline of projects that will support sustainable + 100,000 -ounce gold production as well as growth through exploration and scalability.

The Company is currently developing its 100%-owned Fenelon Gold Property, which is located proximal to the Sunday Deformation Zone, an emerging gold belt in northwestern Quebec with ongoing 70-80,000 m exploration drill program and a recently-completed 35,000-tonne bulk sample. Wallbridge is also pursuing additional advanced-stage projects which are in the Company's near-term project pipeline. Wallbridge is also continuing partner-funded exploration on its large portfolio of copper, and PGM projects in Sudbury, Ontario, with a focus on its high-grade Parkin project.

This press release may contain forward-looking statements (including "forward-looking information" within the meaning of applicable Canadian securities legislation and "forward-looking statements" within the meaning of the US Private Securities Litigation Reform Act of 1995) relating to, among other things, the operations of Wallbridge and the environment in which it operates. Generally, forward-looking statements can be identified by the use of words such as "plans", "expects" or "does not expect", "is expected", "budget", "scheduled", "estimates", "forecasts", "intends", "anticipates" or "does not anticipate", or variations of such words and phrases or statements that certain actions, events or results "may", "could", "would", "might" or "will" be taken, "occur" or "be achieved". Wallbridge has relied on a number of assumptions and estimates in making such forward-looking statements, including, without limitation, the costs associated with the development and operation of its projects. Such assumptions and estimates are made in light of the trends and conditions that are considered to be relevant and are based on information available and the circumstances existing at this time. A number of risk factors may cause actual results of activity, performance or outcomes of such exploration and/or mine development to be materially different from those anticipated or implied by such forward-looking statements including, without limitation, whether such discoveries will result in commercially viable quantities of such mineralized materials, the possibility of changes to project parameters as plans continue to be developed, the ability to execute planned exploration and future drilling programs, the need for additional funding to continue exploration and development efforts, changes in general economic, market and business conditions, and those other risks set forth in Wallbridge's most recent annual information form under the heading "Risk Factors" and in its other public filings. Forward-looking statements do not guarantee future performance and such information is inherently subject to known and unknown risks, uncertainties and other factors that are difficult to predict and may be beyond the control of Wallbridge. Although Wallbridge has attempted to identify important risks and factors that could cause actual actions, events or results to differ materially from those described in the forward-looking statements, there may be other factors and risks that cause actions, events or results not to be as anticipated, estimated or intended. Consequently, undue reliance should not be placed on such forward-looking statements. In addition, the forward-looking statements in this press release are given as of the date hereof.

Wallbridge disclaims any intention or obligation to update or revise any forward-looking statements, whether as a result of new information, the Company's website www.wallbridgemin.com may be required by applicable securities laws. The forward-looking statements contained herein are made by the President of Wallbridge, Marz Kord, P. Eng., M. Sc., MBA, who is a Qualified Person as defined by the Securities Act (Ontario). For more information, contact Marz Kord, P. Eng., M. Sc., MBA, President, Tel: (416) 882-9297 ext. 251, Email: mkord@wallbridgemin.com; Brian Penny, Chief Financial Officer, Tel: (416) 716-8346, Email: bpenny@wallbridgemin.com
