## About Nouveau Monde Graphite

In 2015, Nouveau Monde Graphite discovered a major and high-quality graphite deposit on its Matawinie property, located in Saint-Michel-des-Saints, 150 km north of Montréal. This discovery led to the completion of a Feasibility Study, which revealed strong economics with projected graphite concentrate production of 100,000 tonnes per year over a 26-year period. Nouveau Monde will operate its demonstration plant until 2020. During this period, the Corporation expects to produce 2,000 tonnes of concentrated flake graphite to qualify its products with North American and international clients.

Moreover, in a perspective of vertical integration and sustainable development, Nouveau Monde is planning to establish a large-scale graphite secondary transformation facility, catering to the needs of the booming lithium-ion battery and expandable graphite markets.

With over 60 years of experience in the world of graphite, Nouveau Monde’s team is developing its project with the utmost respect for neighbouring communities, while favouring a minimal ecological footprint. Nouveau Monde’s project has direct access to the workforce and the infrastructure needed to operate its mining project, and it can also rely on an abundant, affordable source of hydroelectricity, a renewable resource.
