

Gatling Extends Bear Deposit 750 m West and 500 m towards surface with 11.2 g/t Au over 5.0 m

16.01.2020 | [CNW](#)

VANCOUVER, Jan. 16, 2020 - [Gatling Exploration Inc.](#) (TSXV: GTR, OTC: GATGF) (the "Company" or "Gatling") is pleased to report that drilling has extended the Bear deposit by 500 meters up plunge from its main body of mineralization and by one kilometer to the west near surface (Figures 1 and 2). Drill hole GTR-19-023 intersected 11.2 g/t Au over 5.0 meters within 150 meters of surface. GTR-19-022 encountered 8.3 g/t Au over 2.0 meters and 5.1 g/t Au over 3.0 meters within 150 meters of surface (Table 1).

News Highlights

- Deposit Extended by Large Step Out: The Bear deposit – one of three gold deposits at Larder – has been extended 750 meters west and 500 meters up plunge by hole GTR-19-023
- Continuity and High-Grade Mineralization Between Deposits: Holes GTR-19-023 and GTR-19-022 were drilled between the Bear and Cheminis deposits. Excellent widths and grades were encountered in this important target area, which helps confirm past drill information.
- Drill Results Indicate Mineralization Extends Up Plunge Much Closer to Surface. Previous operators had interpreted the Bear Lake Fault offset the upper limits of the Bear deposit. This new drilling demonstrates that while the fault does exist, it is little to no offset and that mineralization can be accurately projected up plunge towards surface.

Further assay results are anticipated for drilling completed at near surface targets at Cheminis and Fernland zone extension. Drilling continues to focus on proving that mineralization between the Fernland, Cheminis and Bear deposits are part of a continuous, multi-lens system with a strike length greater than four kilometers (Figure 3).

Dale Ginn, COO, stated "We have further extended the Bear deposit – this time nearly one kilometer west and 500 meters up plunge to surface. The new holes encountered strong grades and widths and are particularly important because the plunge direction of the mineralized lenses is becoming predictable, which in turn help us to target further expansions."

Table 1. Drill Hole Highlights

Hole ID	From (m)	To (m)	Length (m)	Au (g/t)	Zone
GTR-19-022	193.0	195.0	2.0	8.3	South Sediment
	327.0	330.0	3.0	5.1	Ultramafic
GTR-19-023	264.0	269.0	5.0	11.2	Ultramafic
GTR-19-025	177.0	178.0	1.0	2.5	South Sediment
	414.0	417.0	3.0	1.7	South Volcanic
GTR-19-028	283.5	286.5	3.0	2.1	Ultramafic
GTR-19-032	350.6	352.0	1.4	1.4	South Volcanic
	358.0	359.0	1.0	1.2	South Volcanic

About Gatling Exploration

Gatling Exploration is a Canadian gold exploration company focused on advancing the Larder Gold Project, located in the prolific Abitibi greenstone belt in Northern Ontario. The Larder property hosts three high-grade gold deposits along the Cadillac-Larder Lake Break, 35 kilometers east of Kirkland Lake. The project is 100% controlled by Gatling and is comprised of patented and unpatented claims, leases and mining licenses of occupation within the McVittie and McGarry Townships. The 3,370 hectare project area is positioned 7 kilometers west of the Kerr Addison Mine, which produced 11 million ounces of gold. All parts of the Larder property are accessible by truck or all-terrain vehicles on non-serviced roads and trails.
