

Eastfield Resources Ltd.: 2019 Activity Reviewed

25.02.2020 | [The Newswire](#)

[Eastfield Resources Ltd.](#) (TSXV:ETF) is the "mother ship" of the Eastfield Group of companies which include [Eastfield Resources Ltd.](#), [Cariboo Rose Resources Ltd.](#) (TSXV:CRB) and [Consolidated Woodjam Copper Corp.](#) (TSXV:WCC). Eastfield operates with two business strategies. Firstly it conducts mineral exploration both independently and in option/joint venture agreements with other companies and secondly it invests in companies with significant attractive and undervalued assets. The largest single corporate investment is 12.5 million shares of [Consolidated Woodjam Copper Corp.](#) representing approximately 14% of that company's stock. The company holds other strategic investments in companies including [Sun Metals Corp.](#) (TSXV:SUNM). Some of the investments owned by Eastfield relate to previous spin out transactions.

In 2019 Eastfield with option partners GK Resources Ltd. (TSXV:GK) completed exploration on the Iron Lake copper-gold-palladium project located northeast of the community of 100 mile House, BC (see news release dated Dec 6, 2019 for more details) and with option partner Prophecy Potash Corp. (TSXV:NUGT) on the Indata copper gold project located northwest of the community of Fort St. James BC. Highlights of work completed at Indata included the discovery of a new area of mineralization where rock sampling returned grab samples of diorite that included 3.64% copper and 5.95 g/t gold (very little additional sampling has yet been completed in this area and its significance cannot yet be determined; see news release dated Nov 26, 2019 for more details). In 2019 Eastfield solely funded a small program on its 100% owned Zymo project located west of the community of Smithers BC. Zymo, totalling 9,194 hectares (22,718 acres), is Eastfield's most advanced project and has had more than \$4,000,000 in exploration completed on it since Eastfield acquired this project in 2007. Zymo is a copper-gold porphyry with distal base metal precious metal veins. Drill intersections have included 72.0 meters of 0.72% copper and 0.54 g/t gold within a larger intercept of 253.0 meters grading 0.32% copper and 0.23 g/t gold (hole ZY08-09). Auriferous base metal veins up to 100 metres in length have also been discovered from which grab sample results have included 17.6 g/t gold, 568.0 g/t silver and >10% lead-zinc (other samples have returned lesser values). A small soil sampling program was completed on the CR gold property, near the town of Wells, BC, to expand on previous grid sampling where an open-ended, 800 meter long IP chargeability anomaly has been outlined.

Eastfield continues to look for new opportunities and advance its portfolio of projects.
