At-The-Market Equity Program

Wheaton intends to initiate an at-the-market equity program (the "ATM Program") that would allow the Company to issue up to \$300 million worth of common shares from treasury ("Common Shares") to the public from time to time at the prevailing market price or other prices through the Toronto Stock Exchange, the New York Stock Exchange or any other marketplace on which the Common Shares are listed, quoted or otherwise trade. The volume and timing of distributions under the ATM Program, if any, will be determined at the Company's sole discretion, subject to applicable regulatory limitations. The ATM Program remains subject to negotiation of definitive agreements with the Canadian and U.S. agents, filing of the prospectus supplement with the Canadian securities regulators and U.S. Securities and Exchange Commission (the "SEC") respectively and receipt of all regulatory approvals, which conditions are anticipated to be satisfied in April. Wheaton intends that the net proceeds from the ATM Program, if any, will be available as one potential source of funding for stream acquisitions and/or other general corporate purposes including the repayment of indebtedness. Details of the ATM Program will be provided upon filing of a prospectus supplement with the Canadian securities regulators and the SEC in early April. Sales of common shares through the ATM Program will be made pursuant to the terms of an equity distribution agreement.

Outlook

Wheaton's estimated attributable production in 2020 is forecast to be between 685,000 and 725,000 gold equivalent ounces³ comprised of 390,000 to 410,000 gold ounces, 22.0 to 23.5 million silver ounces, and 23,000 to 24,500 palladium ounces. For the five-year period ending in 2024, the Company estimates that average annual gold equivalent production³ will amount to 750,000 ounces. As a reminder, Wheaton does not include any production from Barrick's Pascua-Lama project or Hudbay's Rosemont project in its estimated average five-year production guidance.

From a liquidity perspective, the \$104 million of cash and cash equivalents as at December 31, 2019 combined with the liquidity provided by the available credit under the \$2 billion Revolving Facility and ongoing operating cash flows positions the Company well to fund all outstanding commitments and known contingencies as well as providing flexibility to acquire additional accretive precious metal stream interests.

Health and Safety

The company is keeping up to date on developments surrounding COVID-19 and is taking steps to protect the health and safety of its employees as well as considering any possible impacts to its business.

Non-IFRS Measures

Wheaton has included, throughout this document, certain non-IFRS performance measures, including (i) adjusted net earnings and adjusted net earnings per share; (ii) operating cash flow per share (basic and diluted); (iii) average cash costs of gold, silver and palladium on a per ounce basis and; (iv) cash operating margin.

i. Adjusted net earnings and adjusted net earnings per share are calculated by removing the effects of the non-cash impairment charges, non-cash fair value (gains) losses, non-cash share of losses of associates, the impact of the CRA Settlement and other one-time (income) expenses. The Company believes that, in addition to conventional measures prepared in accordance with IFRS, management and certain investors use this information to evaluate the Company's performance.

The following table provides a reconciliation of adjusted net earnings and adjusted net earnings per share (basic and diluted).

| | Three Months Ended December 31 | | Years Ended December 31 | |

ii. Operating cash flow per share (basic and diluted) is calculated by dividing cash generated by operating

activities by the weighted average number of shares outstanding (basic and diluted). The Company presents operating cash flow per share as management and certain investors use this information to evaluate the Company's performance in comparison to other companies in the precious metal mining industry who present results on a similar basis.

The following table provides a reconciliation of operating cash flow per share (basic and diluted).

| | Three Months Ended December 31 | | Years Ended December 31 | |

| Operating cash flow per share - diluted | \$ 0.29 | \$ 0.24 | \$ 1.12 | \$ 1.08 |

iii. Average cash cost of gold, silver and palladium on a per ounce basis is calculated by dividing the total cost of sales, less depletion, by the ounces sold. In the precious metal mining industry, this is a common performance measure but does not have any standardized meaning prescribed by IFRS. In addition to conventional measures prepared in accordance with IFRS, management and certain investors use this information to evaluate the Company's performance and ability to generate cash flow.

The following table provides a reconciliation of average cash cost of gold, silver and palladium on a per ounce basis.

iv. Cash operating margin is calculated by subtracting the average cash cost of gold, silver and palladium on a per ounce basis from the average realized selling price of gold, silver and palladium on a per ounce basis. The Company presents cash operating margin as management and certain investors use this information to evaluate the Company's performance in comparison to other companies in the precious metal mining industry who present results on a similar basis as well as to evaluate the Company's ability to generate cash flow.

The following table provides a reconciliation of cash operating margin.

Cautionary Language Regarding Reserves And Resources

For further information on Mineral Reserves and Mineral Resources and on Wheaton more generally, readers should refer to Wheaton's Annual Information Form for the year ended December 31, 2018 and other continuous disclosure documents filed by Wheaton since January 1, 2019, available on SEDAR at www.sedar.com. Wheaton's Mineral Reserves and Mineral Resources are subject to the qualifications and notes set forth therein. Mineral Resources which are not Mineral Reserves do not have demonstrated economic viability.

Cautionary Note to United States Investors Concerning Estimates of Measured, Indicated and Inferred Resources: The information contained herein has been prepared in accordance with the requirements of the securities laws in effect in Canada, which differ from the requirements of United States securities laws. The terms "mineral reserve", "proven mineral reserve" and "probable mineral reserve" are Canadian mining terms defined in accordance with Canadian National Instrument 43-101 & Standards of Disclosure for

Mineral Projects ("NI 43-101") and the Canadian Institute of Mining, Metallurgy and Petroleum (the "CIM") – CIM Definition Standards on Mineral Resources and Mineral Reserves, adopted by the CIM Council, as amended (the "CIM Standards"). These definitions differ from the definitions in Industry Guide 7 ("SEC Industry Guide 7") under the U.S. Securities Act of 1933, as amended (the "U.S. Securities Act"). Under U.S. standards, mineralization may not be classified as a "reserve" unless the determination has been made that the mineralization could be economically and legally produced or extracted at the time the reserve determination is made. Also, under SEC Industry Guide 7 standards, a "final" or "bankable" feasibility study is required to report reserves, the three-year historical average price is used in any reserve or cash flow analysis to designate reserves and the primary environmental analysis or report must be filed with the appropriate governmental authority. In addition, the terms "mineral resource", "measured mineral resource", "indicated mineral resource" and "inferred mineral resource" are defined in and required to be disclosed by NI 43-101; however, these terms are not defined terms under SEC Industry Guide 7 and are normally not permitted to be used in reports and registration statements filed with the SEC. Investors are cautioned not to assume that any part or all of the mineral deposits in these categories will ever be converted into reserves. "Inferred mineral resources" have a great amount of uncertainty as to their existence and as to their economic and legal feasibility. It cannot be assumed that all or any part of an inferred mineral resource will ever be upgraded to a higher category. Under Canadian rules, estimates of inferred mineral resources may not form the basis of feasibility or pre-feasibility studies, except in rare cases. Investors are cautioned not to assume that all or any part of an inferred mineral resource exists or is economically or legally mineable. Mineral resources that are not mineral reserves do not have demonstrated economic viability. Disclosure of "contained ounces" in a resource is permitted disclosure under Canadian regulations; however, the SEC normally only permits issuers to report mineralization that does not constitute "reserves" by SEC standards as in place tonnage and grade without reference to unit measures. Accordingly, information contained herein that describes Wheaton's mineral deposits may not be comparable to similar information made public by U.S. companies subject to reporting and disclosure requirements under the United States federal securities laws and the rules and regulations thereunder. United States investors are urged to consider closely the disclosure in Wheaton's Form 40-F, a copy of which may be obtained from Wheaton or from <http://www.sec.gov/edgar.shtml>.

In accordance with the Company's MD&A and financial statements, reference to the Company includes the Company's wholly owned subsidiaries.
