

Northern Lights Resources Growth Metrics Edge Higher After Secret Pass Gold Project Purchase

24.03.2020 | [The Newswire](#)

MONTREAL, March 24th, 2020 - MomentumPR's client [Northern Lights Resources Corp.](#), is listed on the CSE exchange under the symbol: NLR (CNSX:NLR.CN).

Momentum PR is pleased to have produced an informative and comprehensive report on Northern Lights Resources, available here - [Northern Lights Resources Corp.](#) Investor Report.

[Northern Lights Resources Corp.](#) Highlights

- - Northern Lights Resources has two prospective mining projects that continue to affirm long-term growth prospects; Secret Pass Gold Project in Arizona and Medicine Springs Silver/Lead/Zinc project in Nevada.
 - Secret Pass Gold Project is a former gold producing property, 100% owned by NLR with no royalties payable from future production.
 - - The prospective gold project stands out in part because it features two major fault systems with numerous gold deposits showing.
 - NLR is progressing with an exploration plan that includes an aeromagnetic survey and an updated NI43-101 project report for the historic Tin Cup open-pit resource area. Tin Cup offers near-term production opportunities and the potential to host high-grade, shallow underground and open pit gold targets.
 - Medicine Spring Project is targeting a large scale, high-grade, silver-lead-zinc carbonate replacement sulphide deposit.
 - - 123 shallow holes were completed to an average depth of only 43 meters. Notable intersections from the historical drilling includes 18% zinc and 36 g/t Ag over 5m and 7% Zn, 4% Pb, and 114 g/t Ag over 8m.
 - Exploration results defined a strong NE trending lead-zinc-silver soil anomaly that extends >2000 metres in length and 350-500 meters in width that is planned for drilling in 2020.

[Northern Lights Resources Corp.](#) (CSE:NLR) is a growth-oriented company committed to increased shareholder value through exploration and development of high-quality resource projects.

Secret Pass located in Mojave County, Arizona just 15 km north of the historic Oatman gold mining district is a region that produced 2 million ounces of gold 1892-1940. The project area's excellent advantages include power, water, a skilled labor pool, plus epithermal gold mineralization, hosted by steeply dipping regional fault systems. Past exploration drilling completed in 1984-1991 intersected significant high-grade gold mineralization in the Tin Cup Gold Zone, with gold assays ranging as high as 40g/t.

The Medicine Springs property located in Elko County, Nevada is a previous producer with an extensive drilling prospective for high-grade oxide and sulphide silver, zinc and lead mineralization. Northern Lights is

earning 100% equity interest in the project.

Backed by an experienced management team, Northern Lights Resources is on its way to becoming a highly valued exploration company in terms of value generation supported by two highly prospective mining projects.
