

BTU Metals Corp. Drill at TNT VMS Target Has Started Turning

02.06.2020 | [ACCESS Newswire](#)

VANCOUVER, June 2, 2020 - [BTU Metals Corp.](#) ("BTU" or the "Company") (BTU-TSX:V) announces that drilling has now commenced on targets in the TNT area of the Dixie Halo project. As discussed in a previous release (see PR dated May 25th, 2020) various Time Domain Electromagnetic ("TDEM") targets outlined in the two phases of recent TDEM survey work will be drill tested, with the first hole designed to intersect a conductive target at a depth of at least 500m as the interpreted top of the conductive body is thought to be at a depth of 400m. The target has a strike dimension of 800 metres and a similar depth extent.

Paul Wood, BTU CEO, stated "We have been eager to be back drilling on the TNT target and we are delighted that our technical crews have been able to mobilize so quickly. We know that there is copper as well as silver and some gold in this large VMS alteration system and we have now detailed the most conductive portions within the overall TNT trend.

The technical contents of this release were approved by Mr. Bruce Durham, P. Geo., a qualified person as defined by National Instrument 43-101.

ON BEHALF OF THE BOARD
"Paul Wood"

Paul Wood, CEO, Director
